Evolution as Computation Laura F. Landweber,Erik Winfree,2012-12-06 The study of the genetic basis for evolution has flourished in this century as well as our understanding of the evolvability and programmability of biological systems Genetic algorithms meanwhile grew out of the realization that a computer program could use the biologically inspired processes of mutation recombination and selection to solve hard optimization problems Genetic and evolutionary programming provide further approaches to a wide variety of computational problems A synthesis of these experiences reveals fundamental insights into both the computational nature of biological evolution and processes of importance to computer science Topics include biological models of nucleic acid information processing and genome evolution molecules cells and metabolic circuits that compute logical relationships the origin and evolution of the genetic code and the interface with genetic algorithms and genetic and evolutionary programming Parallel Computing Technologies Victor Malyshkin,1995-08-16 Proceedings Parallel Computing **Quantitative Evaluation of Computing and Communication Systems** Heinz Beilner,Falko Bause,1995-09-13 This book constitutes the proceedings of the 8th International Conference on Modelling Techniques and Tools for Computer Performance Evaluation Performance Tools 95 and of the 8th GI ITG Conference on Measuring Modelling and Evaluating Computing and Communication Systems MMB 95 held jointly in Heidelberg Germany in September 1995 The volume presents 26 full refereed papers selected from a total of 86 submissions together with two invited contributions The scope of the papers includes measurement and model based approaches for quantitative systems assessment reports on theoretical and methodological progress and novel and improved assessment techniques and their tool implementations and applications Paradigms of Combinatorial Optimization Vangelis Th. Paschos,2014-08-08 Combinatorial optimization is a multidisciplinary scientific area lying in the interface of three major scientific domains mathematics theoretical computer science and management The three volumes of the Combinatorial Optimization series aim to cover a wide range of topics in this area These topics also deal with fundamental notions and approaches as with several classical applications of combinatorial optimization Concepts of Combinatorial Optimization is divided into three parts On the complexity of combinatorial optimization problems presenting basics about worst case and randomized complexity Classical solution methods presenting the two most known methods for solving hard combinatorial optimization problems that are Branch and Bound and Dynamic Programming Elements from mathematical programming presenting fundamentals from mathematical programming based methods that are in the heart of Operations Research since the origins of this field **Computer Aided Systems Theory - EUROCAST '95** Franz Pichler,Roberto Moreno-Diaz,Rudolf F.
