Mathematics And The Medieval Ancestry Of Physics Variorum Collected Studies:

Mathematics and the Medieval Ancestry of Physics George Molland, 2024-10-28 The central theme of this volume lies in the medieval consciousness of mathematics and the variety of strategies adopted to apply it in other areas notably natural philosophy In diachronic terms Dr Molland considers ways in which ancient mathematics particularly geometry was assimilated in the Middle Ages and how it was radically transformed in the 17th century especially by Descartes A pervasive concern is with ideas of scientific progress the author argues that medieval commentatorial and disputational modes encouraged probing attitudes to existing knowledge aimed at deepening individual understanding rather than more aggressive endeavours to advance public knowledge characteristic of later periods What brought about this change is the subject of several studies here others form more specifically on individual scholars in particular the important figure of Roger Bacon

The Development of Mathematics in Medieval Europe Menso Folkerts, 2024-10-28 The Development of Mathematics in Medieval Europe complements the previous collection of articles by Menso Folkerts Essays on Early Medieval Mathematics and deals with the development of mathematics in Europe from the 12th century to about 1500 In the 12th century European learning was greatly transformed by translations from Arabic into Latin Such translations in the field of mathematics and their influence are here described and analysed notably al Khwarizmi's Arithmetic through which Europe became acquainted with the Hindu Arabic numerals and Euclid's Elements Five articles are dedicated to Johannes Regiomontanus perhaps the most original mathematician of the 15th century and to his discoveries in trigonometry algebra and other fields The knowledge and application of Euclid's Elements in 13th and 15th century Italy are discussed in three studies while the last article treats the development of algebra in South Germany around 1500 where much of the modern symbolism used in algebra was developed

Numerals and Arithmetic in the Middle Ages Charles Burnett, 2024-10-28 This volume the third by Charles Burnett in the Variorum series brings together articles on the different numeral forms used in the Middle Ages and their use in mathematical and other contexts Some pieces study the introduction of Hindu Arabic numerals into Western Europe documenting in more detail than anywhere else the different forms in which they are found before they acquired the standard shapes with which we are familiar today Others deal with experiments with other forms of numeration within Latin script e.g. using the first nine Roman numerals as symbols with place value abbreviating the Roman numerals and using the Latin letters as numerals The author discusses how different types of numerals are used for different purposes and the application of numerals to the abacus and to calculation with pen and ink The studies include the critical edition of several Latin texts

Domingo de Soto and the Early Galileo William A. Wallace, 2018-01-18 The unifying theme in this second volume of essays by William A Wallace to be published in the Variorum series is signaled in the title of the opening paper Domingo de Soto and the Iberian roots of Galileo's science The seven essays in the first part provide textual studies of Soto's early formulations of the laws of falling bodies the context in which they were developed in the 16th century

and the ways in which they were transmitted in Spain and Portugal to the early 17th century mainly by Jesuit scholars The following essays focus on the young Galileo and his work at Pisa and Padua leading to his discovery of the law of uniform acceleration in free fall Textual evidence is presented for an indirect influence of Soto's work on Galileo mediated by Jesuits who were teaching at Padua in the first decade of the 17th century **Arabic Mathematical Sciences** Richard Lorch, 2024-12-11 This book deals with the mathematical sciences in medieval Islam and focuses on three main themes The first is that of the translation of texts from Greek into Arabic then from Arabic into Latin and close attention is paid to terminology and comparative vocabulary The other themes are those of the technology of the sphere and of astronomical instruments which are treated both from the mechanical and mathematical point of view Several of the articles combine these themes for instance the study of the self rotating sphere of al Khazini 12th century or that on the transmission of spherical trigonometry to the West Four articles also contain substantial texts with translation and commentary **Essays on Early Medieval Mathematics** Menso Folkerts, 2023-06-14 This book deals with the mathematics of the medieval West between ca 500 and 1100 the period before the translations from Arabic and Greek had their impact Four of the studies appear for the first time in English Among the topics treated are the Roman surveyors agrimensores recreational mathematics in the period of Bede and Alcuin geometrical texts compiled in Corbie and Lorraine from Latin sources from late antiquity the abacus at the time of Gerbert pope Sylvester II and a board game invented in the first half of the 11th century the Rithmimachia to help people to learn mathematics Included in the volume are critical editions of several texts e g that of Franco of Liège on squaring the circle Bede and Alcuin on recreational mathematics and part of Pseudo Boethius Geometry I The book opens with a survey of mathematics in the Middle Ages and ends with a history of Rithmimachia up to the 17th century when the game fell into disuse **Master of the Sacred Page** James R. Ginther, 2017-03-02 Modern scholarship has examined the life and works of Robert Grosseteste ca 1170-1253 mainly in a philosophical or episcopal context yet Grosseteste wrote many treatises on pastoral theology spent some years as a regent master in theology at the University of Oxford and maintained interest in theological discourse throughout his time as Bishop of Lincoln This book offers the first scholarly study of Grosseteste as theologian taking account of the whole range of his theological writing both in published and unedited sources Ginther reveals the central focus of Grosseteste's theology as the person and work of Christ with the person of Christ as the interpretive key by which humanity comes to see the Trinity in the created world and the means by which humanity may participate in the divine Surveying some of the major doctrinal issues of the thirteenth century this book offers a thorough introduction to the theology of the period **Stars and Numbers** Paul Kunitzsch, 2022-04-19 The studies brought together in this second collection of articles by Paul Kunitzsch continue the lines of research evident in his previous volume The Arabs and the Stars The Arabic materials discussed stem mostly from the early period of the development of Arabic Islamic astronomy up to about 1000AD while the Latin materials belong to the first stage of Western contact with

Arabic science at the end of the 10th century and to the peak of Arabic Latin translation activity in 12th century Spain The first set of articles focuses upon Ptolemy in the Arabic Latin tradition followed by further ones on Arabic astronomy and its reception in the West the final group looks at details of the transmission of Euclid's Elements Archives Internationales D'histoire Des Sciences, 1997 *Calculus and Analytical Mechanics in the Age of Enlightenment* Craig G. Fraser, 1997 A collection of 13 articles relating to developments in the history of 18th century exact science focusing on the writings of such figures as Jean d'Alembert Leonhard Euler and Joseph Louis Lagrange The volume presents their work on the principles of calculus and the theory of motion and serves to clarify the conceptual foundation of analysis and mechanics in the century following Newton A detailed historical and critical study of conceptual change involving fundamental links between pure and applied mathematics is provided **Bibliografisch Repertorium Van de Wijsbegeerte**), 2000 **Chemistry and the Chemical Industry in the 19th Century** Wilfred Vernon Farrar, 1997 The first part of this text examines the Henrys in Manchester and their role in the chemical industry in the 19th century The second half examines other aspects of the chemical industry chemistry and chemists including the work of Sir B C Brodie and his calculus on chemical operations BLACKWELL S *Studies in the Culture of Science in France and Britain Since the Enlightenment* Maurice P. Crosland, 1995 A wide range of the author's previously published papers in the history of science is brought together in this book The articles which are mainly concerned with the 18th and 19th centuries are arranged in three sections science in the Enlightenment period science in an institutional context national and international science Some of the papers present a broad perspective others are of a more detailed nature drawing on the archives of the Paris Academy of Sciences and the Royal Society of London An original interpretation of the career of Priestley is followed by a historiographical article on Lavoisier Papers with a more social approach include subjects such as the professionalisation of science peer review and science and war It is argued that science became a profession in France long before it did in Britain France also created an important precedent in the academic world in demanding publications of research as credentials **Forthcoming Books** Rose Army, 1995-02 Isis Cumulative Bibliography 1986-1995: Subjects. Time periods: Antiquity through 18th century John Neu, 1997 **The Spatial Reformation** Michael J. Sauter, 2018-11-21 In *The Spatial Reformation* Michael J Sauter offers a sweeping history of the way Europeans conceived of three dimensional space including the relationship between Earth and the heavens between 1350 and 1850 He argues that this spatial reformation provoked a reorganization of knowledge in the West that was arguably as important as the religious Reformation Notably it had its own sacred text which proved as central and was as ubiquitously embraced Euclid's Elements Aside from the Bible no other work was so frequently reproduced in the early modern era According to Sauter its penetration and suffusion throughout European thought and experience call for a deliberate reconsideration not only of what constitutes the intellectual foundation of the early modern era but also of its temporal range The Spatial Reformation contends that space is a human construct that is it is a concept that arises from the

human imagination and gets expressed physically in texts and material objects Sauter begins his examination by demonstrating how Euclidean geometry when it was applied fully to the cosmos estranged God from man enabling the breakthrough to heliocentrism and by extension the discovery of the New World Subsequent chapters provide detailed analyses of the construction of celestial and terrestrial globes Albrecht Dürer's engraving Melencolia the secularization of the natural history of the earth and man and Hobbes's rejection of Euclid's sense of space and its effect on his political theory Sauter's exploration culminates in the formation of a new anthropology in the eighteenth century that situated humanity in reference to spaces and places that human eyes had not actually seen The Spatial Reformation illustrates how these disparate advancements can be viewed as resulting expressly from early modernity's embrace of Euclidean geometry

Science, Industry, and the Social Order in Post-revolutionary France Robert Fox, 1995 The essays in this volume focus on the public rather than the private face of science focusing on the interrelated activities of education popularization and the exploration of scientific and technical knowledge in industry They span the 18th and 19th centuries and up until 1914

Arches, Vaults, and Buttresses Jacques Heyman, 1996 **The Cambridge History of Medieval Philosophy** Robert Pasnau, Christina van Dyke, 2010 The Cambridge History of Medieval Philosophy comprises over 50 specially commissioned essays by experts on the philosophy of this period Starting in the late 8th century the chapters take the reader through developments in many and varied fields including logic and language natural philosophy ethics and theology *Noting Music, Marking Culture* Dorit Esther Tanay, 1999
