**Mathematics and Computer Science in Biology and Medicine** Conference on Mathematics and Computer Science in Biology and Medicine. Oxford, Medical Research Council (Great Britain), 1965     *Modeling in Computational Biology and Biomedicine* Frédéric Cazals, Pierre Kornprobst, 2012-11-06 Computational biology mathematical biology biology and biomedicine are currently undergoing spectacular progresses due to a synergy between technological advances and inputs from physics chemistry mathematics statistics and computer science The goal of this book is to evidence this synergy by describing selected developments in the following fields bioinformatics biomedicine and neuroscience This work is unique in two respects first by the variety and scales of systems studied and second by its presentation Each chapter provides the biological or medical context follows up with mathematical or algorithmic developments triggered by a specific problem and concludes with one or two success stories namely new insights gained thanks to these methodological developments It also highlights some unsolved and outstanding theoretical questions with a potentially high impact on these disciplines Two communities will be particularly interested in this book The first one is the vast community of applied mathematicians and computer scientists whose interests should be captured by the added value generated by the application of advanced concepts and algorithms to challenging biological or medical problems The second is the equally vast community of biologists Whether scientists or engineers they will find in this book a clear and self contained account of concepts and techniques from mathematics and computer science together with success stories on their favorite systems The variety of systems described represents a panoply of complementary conceptual tools On a practical level the resources listed at the end of each chapter databases software offer invaluable support for getting started on a specific topic in the fields of biomedicine bioinformatics and neuroscience     *Where Mathematics, Computer Science, Linguistics and Biology Meet* Gheorghe Păun, 2001 There are not many interdisciplinary scientific fields as formal language theory In this volume it is presented as the very intersection point between Mathematics Computer Science Linguistics and Biology The book is a collection of papers going deep into classical topics in computer science inspired formal languages as well as other ones showing new concepts and problems motivated in linguistics and biology The papers are organized in four sections Grammars and Grammar Systems Automata Languages and Combinatorics and Models of Molecular Computing They clearly prove the power wealth and vitality of the theory nowadays and sketch some trends for its future development The volume is intended for an audience of computer scientists computational linguists theoretical biologists and any other people interested in dealing with the problems and challenges of interdisciplinarity     **Mathematical Principles in Bioinformatics** Stephen S.-T. Yau, Xin Zhao, Kun Tian, Hongyu Yu, 2024-01-11 This textbook introduces bioinformatics to students in mathematics with no biology background assumed and it provides solid mathematical tools for biology students along with an understanding of how to implement them in bioinformatics problems In addition to the basics the text offers new approaches to understanding biological sequences

The concise presentation distinguishes itself from others on the subject discussing and providing principles that relate to current open problems in bioinformatics as well as considering a variety of models The convex hull principle is highlighted opening a new interdisciplinary research area at the intersection of biology mathematics and computer science Prerequisites include first courses in linear algebra probability and statistics and mathematical analysis Researchers in mathematics biology and math biology will also find aspects of this text useful This textbook is written based on the authors research works that have been published in various journals along with the lecture notes used when teaching bioinformatics courses at the University of Illinois at Chicago and at Tsinghua University The content may be divided into two parts The first part includes three chapters introducing some basic concepts Chapter 1 provides biological background in molecular biology for mathematicians Chapter 2 describes biological databases that are commonly used Chapter 3 is concerned with alignment methods including global local alignment heuristic alignment and multiple alignment The second part consisting of five chapters describes several bioinformatics principles using a rigorous mathematical formulation Chapter 4 introduces the time frequency spectral principle and its applications in bioinformatics In Chapters 5 and 6 two strategies are used the graphical representation and the natural vector method to represent biological sequences and conduct sequence comparison and phylogenetic analysis without alignment Chapter 7 presents the convex hull principle and shows how it can be used to mathematically determine whether a certain amino acid sequence can be a protein The last chapter summarizes additional mathematical ideas relating to sequence comparisons such as new feature vectors and metrics This part focuses on the governing principle in biology and provides plenty of alignment free methods which cannot be found in any other book

**Where Mathematics, Computer Science, Linguistics and Biology Meet** Carlos Martín-Vide,V. Mitrana,2014-01-15

**Undergraduate Mathematics for the Life Sciences** Glenn Ledder,Jenna P. Carpenter,Timothy D. Comar,2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see Where Mathematics, Computer Science, Linguistics and Biology Meet Carlos Martín Vide,Victor Mitrana,2001 *BioMath in the Schools* Margaret B. Cozzens,Fred S.

Roberts,2011 Even though contemporary biology and mathematics are inextricably linked high school biology and mathematics courses have traditionally been taught in isolation But this is beginning to change This volume presents papers related to the integration of biology and mathematics in high school classes The first part of the book provides the rationale for integrating mathematics and biology in high school courses as well as opportunities for doing so The second part explores the development and integration of curricular materials and includes responses from teachers Papers in the third part of the book explore the interconnections between biology and mathematics in light of new technologies in biology The last paper in the book discusses what works and what doesn't and presents positive responses from students to the integration of mathematics and biology in their classes Mathematics, Computer Science and Logic - A Never Ending Story Peter

Paule,2013-09-17 This book presents four mathematical essays which explore the foundations of mathematics and related topics ranging from philosophy and logic to modern computer mathematics While connected to the historical evolution of these concepts the essays place strong emphasis on developments still to come The book originated in a 2002 symposium celebrating the work of Bruno Buchberger Professor of Computer Mathematics at Johannes Kepler University Linz Austria on the occasion of his 60th birthday Among many other accomplishments Professor Buchberger in 1985 was the founding editor of the Journal of Symbolic Computation the founder of the Research Institute for Symbolic Computation RISC and its chairman from 1987 2000 the founder in 1990 of the Softwarepark Hagenberg Austria and since then its director More than a decade in the making Mathematics Computer Science and Logic A Never Ending Story includes essays by leading authorities on such topics as mathematical foundations from the perspective of computer verification a symbolic computational philosophy and methodology for mathematics the role of logic and algebra in software engineering and new directions in the foundations of mathematics These inspiring essays invite general mathematically interested readers to share state of the art ideas which advance the never ending story of mathematics computer science and logic Mathematics Computer Science and Logic A Never Ending Story is edited by Professor Peter Paule Bruno Buchberger's successor as director of the Research Institute for Symbolic Computation **An Introduction to the Mathematics of Biology: with**

**Computer Algebra Models** Edward K. Yeagers,James V. Herod,Ronald W. Shonkweiler,2013-12-01 Biology is a source of fascination for most scientists whether their training is in the life sciences or not In particular there is a special satisfaction in discovering an understanding of biology in the context of another science like mathematics Fortunately there are plenty of interesting and fun problems in biology and virtually all scientific disciplines have become the richer for it For example two major journals Mathematical Biosciences and Journal of Mathematical Biology have tripled in size since their inceptions 20 25 years ago The various sciences have a great deal to give to one another but there are still too many fences separating them In writing this book we have adopted the philosophy that mathematical biology is not merely the intrusion of one science into another but has a unity of its own in which both the biology and the mathematics should be equal and complete

and should flow smoothly into and out of one another We have taught mathematical biology with this philosophy in mind and have seen profound changes in the outlooks of our science and engineering students The attitude of Oh no another pendulum on a spring problem or Yet one more LCD circuit completely disappeared in the face of applications of mathematics in biology There is a timeliness in calculating a protocol for administering a drug
