Содержательные основы подготовки будущего учителя математики к формированию математической грамотности учащихся основной школы

Бычков А. В.

Аннотация. Цель исследования – выявить содержание математической грамотности учащихся для определения содержательных основ методической подготовки будущего учителя математики. В статье рассмотрено понятие математической грамотности в контексте формирования функциональной грамотности учащихся основной школы. Проведен анализ структуры математической грамотности и исследований, посвященных вопросам формирования содержания отдельных ее компонентов. Показано, что в отечественных исследованиях не сложилось единого подхода к определению набора действий, которым необходимо обучать школьников при выполнении ими этапа формализации ситуации, представленной на естественном языке, и интерпретации полученного результата при решении практико-ориентированных задач. На основе анализа инструментария международного исследования PISA и работ отечественных исследователей составлен перечень действий, целенаправленное обучение которым позволит подготовить будущего учителя математики к формированию у учащихся умений по построению математической модели и интерпретации полученных результатов в процессе решения практико-ориентированных задач. Научная новизна исследования заключается в обосновании необходимости включения в содержание методической подготовки будущего учителя математики специальных действий, лежащих в основе этапов формализации ситуации, представленной на естественном языке, и интерпретации полученных результатов в ходе решения практико-ориентированных задач, с целью формирования математической грамотности учащихся. В результате показана связь между некоторыми специфическими действиями, необходимыми для осуществления этапа формализации ситуации, представленной на естественном языке, и коммуникативными, учебными и информационными умениями, определяющими функциональную грамотность учащихся основной школы.

Substantive Foundations of Future Mathematics Teachers' Training for Mathematical Literacy Formation in Primary School Students

Bychkov A. V.

Abstract. The study aims to identify the content of students' mathematical literacy in order to determine the substantive foundations of future mathematics teachers' methodological training. The paper considers the notion of mathematical literacy in the context of functional literacy formation in primary school students. The author analyses the structure of mathematical literacy and research papers addressing the formation of the content of its individual components. The work shows that in Russian studies, there is no unified approach to determining the set of actions that need to be taught to schoolchildren when they operate at the stage of formalisation of a situation presented in a natural language and interpretation of the result obtained in the process of solving practice-oriented tasks. Having analysed the toolkit of the international PISA study and papers by Russian researchers, the author has compiled a list of actions targeted training of which will prepare future mathematics teachers for the formation of students' skills in building a mathematical model and interpreting the results obtained in the process of solving practice-oriented tasks. Scientific novelty of the study lies in providing rationale for the need to include in the content of future mathematics teachers' methodological training special actions underlying the stages of formalisation of a situation presented in a natural language and interpretation of the results obtained in the course of solving practice-oriented tasks with the purpose of forming students' mathematical literacy. As a result, the relationship between certain specific actions necessary for the implementation of the stage of formalisation of a situation presented in a natural language and communicative, educational and informational skills that determine primary school students' functional literacy has been shown.
