Whose Ideas Matter? Amitav Acharya, 2011-07-22 Asia is a crucial battleground for power and influence in the international system It is also a theater of new experiments in regional cooperation that could redefine global order Whose Ideas Matter is the first book to explore the diffusion of ideas and norms in the international system from the perspective of local actors with Asian regional institutions as its main focus There s no Asian equivalent of the EU or of NATO Why has Asia and in particular Southeast Asia avoided such multilateral institutions Most accounts focus on U S interests and perceptions or intraregional rivalries to explain the design and effectiveness of regional institutions in Asia such as SEATO ASEAN and the ASEAN Regional Forum Amitav Acharya instead foregrounds the ideas of Asian policymakers including their response to the global norms of sovereignty and nonintervention Asian regional institutions are shaped by contestations and compromises involving emerging global norms and the preexisting beliefs and practices of local actors Acharya terms this perspective constitutive localization and argues that international politics is not all about Western ideas and norms forcing their way into non Western societies while the latter remain passive recipients Rather ideas are conditioned and accepted by

local agents who shape the diffusion of ideas and norms in the international system Acharya sketches a normative trajectory of Asian regionalism that constitutes an important contribution to the global sovereignty regime and explains a remarkable continuity in the design and functions of Asian regional institutions

Threshold Concepts within the Disciplines, 2008-01-01 Threshold Concepts within the Disciplines brings together leading writers from various disciplines and national contexts in an important and readable volume for all those concerned with teaching and learning in higher education The foundational principle of threshold concepts is that there are in each discipline conceptual gateways or portals that must be negotiated to arrive at important new understandings In crossing the portal transformation occurs both in knowledge and subjectivity Such transformation involves troublesome knowledge a key concern for contributors to this book who identify threshold concepts in their own fields and suggest how to deal with them Part One extends and enhances the threshold concept framework containing chapters that articulate its qualities its links to other social theories of learning and other traditions in educational research Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including computing engineering biology design modern languages education and economics In the many empirical case studies educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts Other chapters emphasise the equally important being and becoming dimension of learning Part Three suggests pedagogic directions for those at the centre of the education project with contributions focusing on the socialisation of academics and their continuing quest to be effective teachers The book will be of interest to disciplinary teachers educational researchers and educational developers It also is of relevance to issues in quality assurance and professional accreditation

Colloidal Active Matter Francesc Sagués Mestre, 2022-10-07 What do bird flocks bacterial swarms cell tissues and cytoskeletal fluids have in common They are all examples of active matter This book explores how scientists in various disciplines from physics to biology have collated a solid corpus of experimental designs and theories during the last two decades to decipher active systems The book addresses from a multidisciplinary viewpoint the field of active matter at a colloidal scale Concepts experiments and theoretical models are put side by side to fully illuminate the subtleties of active systems A large variety of subjects from microswimmers or driven colloids to self organized active fluids are analysed within a unified perspective Generic collective effects of self propelled or driven colloids such as motility induced flocking and new paradigms such as the celebrated concept of active nematics in reconstituted protein based fluids are discussed using well known experimental scenarios and recognized theories Topics are covered with rigor and in a self consistent way reaching both practitioners and newcomers to the field The diversity of topics and conceptual challenges in active matter have long hampered the chance to explore the field with a general perspective This monograph the first single authored title on active matter is intended to fill this gap by bridging disparate experimental and theoretical interests from colloidal soft matter to cell biophysics

Matter of Life, 1996-10 *Philosophical Mechanics in the Age of Reason* Katherine Brading, Marius Stan, 2024-02-27 From pebbles to planets tigers to tables pine trees to people animate and inanimate natural and artificial bodies are everywhere Bodies populate the world acting and interacting with one another and they are the subject matter of Newton's laws of motion But what is a body And how can we know how they behave In *Philosophical Mechanics in the Age of Reason* Katherine Brading and Marius Stan examine the struggle for a theory of bodies At the beginning of the 18th century physics was the branch of philosophy that studied bodies in general Its primary task was to provide a qualitative account of the nature of bodies including their essential properties causal powers and generic behaviors Pursued by a variety of figures both canonical from Leibniz to Kant and less familiar from Du Châtelet and Euler to d'Alembert and Lagrange this proved a difficult task At stake were the appropriate epistemologies and methods for theorizing about the natural world Solutions demanded the combined resources of philosophy physics and mechanics what Brading and Stan call a philosophical mechanics Brading and Stan analyze a century of widespread concerted efforts to solve the problem of bodies they examine the consequences of the many failures both for the problem itself and for philosophy more generally They reveal relationships among disparate themes of 18th century physics and philosophy from the nature of matter to the motion of a vibrating string causation to the principle of least action and the role of subtle matter in collision

theory to analytic mechanics All of these Brading and Stan argue are related to the eventual emergence of physics as an independent discipline autonomous from philosophy more than a century after Newton's *Principia* This book provides a new framing of natural philosophy and its transformations in the Enlightenment and it proposes an account of how physics and philosophy evolved into distinct fields of inquiry

The Dark Matter Problem Robert H. Sanders, 2010-04-22 Most astronomers and physicists now believe that the matter content of the Universe is dominated by dark matter hypothetical particles which interact with normal matter primarily through the force of gravity Though invisible to current direct detection methods dark matter can explain a variety of astronomical observations This book describes how this theory has developed over the past 75 years and why it is now a central feature of extragalactic astronomy and cosmology Current attempts to directly detect dark matter locally are discussed together with the implications for particle physics The author comments on the sociology of these developments demonstrating how and why scientists work and interact Modified Newtonian Dynamics MOND the leading alternative to this theory is also presented This fascinating overview will interest cosmologists astronomers and particle physicists Mathematics is kept to a minimum so the book can be understood by non specialists
