

FINANCIAL MARKETS

Financial markets are markets where funds are transferred from people that have an excess of available funds to people who have a need of them. Financial markets are crucial to promote greater economic efficiency because they **move funds to people** that have a **productive use** of them. In the financial markets are traded activities, which are financial instruments, that **affect personal wealth and the business cycle**.

Bonds: bonds are debt securities in which the issuer promises to make payments periodically for a specified period of time. Corporations use bonds to **raise funds to finance their activities** (a more efficient way to allocate money for the system).

The cost of borrowing money is the **interest rate**, and there is an **inverse relationship between bond prices and interest rates**.

$$\Delta \uparrow i \Rightarrow \Delta \downarrow P_B$$

if the interest grows, the price of the bonds diminishes.

Since different interest rates have a **tendency to move in unison**, it is common for economists to lump interest rates together, but it is **important to differentiate between**:

- **Short and long term interest rates**, which in other words is studying the term structure of interest rates.
- **Risk free and risky assets**, interest rates move in reaction to inflation and default risk. The more an asset is risky, the higher its interest rate will be.
