Evolutionary Biogeography of the Marine Algae of the North Atlantic David J. Garbary, G. Robin South, 2013-06-29 Algal systematists geologists and evolutionary biologists provide a synthesis of the evolutionary biogeography of red brown and green algae of the North Atlantic Ocean also considering their relationships with species and genera in the Arctic and Pacific Oceans as well as other subtropical and tropical seas The history of the Atlantic Basin and its connections to other ocean basins is treated from the geological paleontological and paleoclimatic perspective This is contrasted with biogeographic analyses of marine animal systems and the role of plant animal interactions in evolution Some of the approaches include traditional systematic studies cladistic analysis the experimental evaluation of environment in establishing distribution limits and the application of molecular biology

Marine Parasitology Klaus Rohde, 2005-09-13 This comprehensive authoritative and up to date work provides the definitive overview of marine parasites worldwide It is an invaluable reference for students and researchers in parasitology and marine biology and will also be of interest to ecologists aquaculturists and invertebrate biologists Initial chapters review the diversity and basic biology of the different groups of marine parasites discussing their morphology life cycles infection mechanisms and effects on hosts The ecology and importance of marine parasites are discussed in the second part of the book where contributions investigate behavioural and ecological aspects of parasitism and discuss the evolution and zoogeography of marine parasites In addition the economic environmental and medical significance of these organisms is outlined particularly their importance in aquaculture and their effects on marine mammals and birds Written by an international team of contributors the emphasis is on a thorough grounding in marine parasitology combined with reviews of novel concepts and cutting edge research

Turbellarian Biology Seth Tyler, 2012-12-06 Turbellarian platyhelminths or as they are known now among cladistic systematists free living Platyhelminthes comprise a widely distributed assemblage of lower worms found in marine freshwater and even occasionally in terrestrial habitats The phylum Platyhelminthes may be more widely known for its parasitic members since the major parasitic groups of the tapeworms flukes and their relatives are more speciose and have greater impact on everyday human life but the turbellarians are more diverse and as inhabitants of virtually any aquatic habitat are more widespread as well Many of the lower turbellarians are rather simple in morphology and have served as models for ancestors of the Bilateria i e the bulk of the animal phyla Others are quite complex organisms especially in the morphology of their reproductive systems which are highly specialized The majority are free living in aquatic habitats but a number of interesting parasitic and commensal species are found scattered among the higher turbellarian taxa But turbellarians are more than just taxonomic curiosities They have served as illustrative models in research on a variety of basic life processes For example their high capacity for regeneration has made them the subject of a large literature in developmental biology the occurrence of mixoploidy and other karyological oddities among turbellarians has been important in understanding evolution of the genome and the fine structure and biochemistry of the nervous system in turbellarians is revealing important principles of the organization of so called primitive neural systems

Biology of Turbellaria and some Related Flatworms Lester R.G. Cannon, 2012-12-06 Turbellaria the mainly free living flatworms and some of their parasitic relatives are among the simplest of the metazoa and as such provide ideal models for a wide range of fundamental studies

The 60 contributions to Biology of Turbellaria and some Related Flatworms cover taxonomy and phylogeny biogeography and genetics ecology and behaviour Anatomy and ultrastructure development and regeneration genes and sequences and neurophysiology Biology of Turbellaria and some Related Flatworms is the most recent compilation in the series published in Hydrobiologia since 1981 covering research on these flatworms assembled by the world's leading authorities on the group Audience These papers present the advanced student and serious researcher with up to date information on an important but often neglected group whose place in the animal kingdom demands greater attention CBM ,2011 *Overview of the Conservation of Australian Marine Invertebrates* W. F. Ponder,P. A. Hutchings,Rebecca Chapman,2002 This volume is intended to be a companion to Yen and Butcher's 1997 overview of the conservation of non marine invertebrates As with that work we see one of our major roles as addressing the perceptual and practical imbalance in the current approach to conservation and facilitating the conservation of marine invertebrates in Australia and its Exclusive Economic Zone EEZ

Interrelationships of the Platyhelminthes D T J Littlewood,R. A. Bray,2014-04-21 Interrelationships of the Platyhelminthes elucidates the role of the flatworms in the animal kingdom It brings together results from an international group of experts spanning many disciplines who give evidence for the phylogeny of flatworms and constituent major taxa A combined approach using traditional comparative techniques along with the modern techniques of molecular phylogeny is utilized to show that the monophyly of the phylum is not fully established and that the phylum may in fact consist of two groups the acoels and their relatives which are basal metazoans and the Rhabditophora which is a more derived group
