Cardiovascular Disease Linda L. Gallo, 2012-12-06 The Fourteenth Washington International Spring Symposium held in Washington D C in June 1994 brought together over 400 leading scientists from 21 countries to review and update research on cardiovascular disease This group satisfied the symposium goals of formulating a more comprehensive and integrated picture of the events contributing to atherosclerosis and of exploring modified gene expression as an to understanding the causes of atherosclerosis and providing clues to the approach prevention and treatment This volume contains most of the papers presented at the eight plenary sessions together with selected contributions from the special sessions The multidisciplinary nature of the chapters and their authors should stimulate the interests of biochemists cell and molecular biologists pathologists pharmacologists epidemiologists nutritionists and clinicians The volume is divided into eight sections which reflect the focus of the plenary sessions Part I focuses on the pathophysiology of atherosclerotic plaques and predicts that the nature of the fibrous cap of atheroma determines plaque disruption and clinical events Papers in Part II deal with atherogenic lipoproteins The introductory paper reviews the current view of the role of plasma lipoproteins in atherosclerosis With respect to the newer members on the list oxidized LDL Lp a evidence is provided that suggests the involvement of one major gene in the development of oxidized LDL lipids the expression of inflammatory genes and the development of aortic fatty streaks

The Cell Cycle Valerie W. Hu, 2012-12-06 Interest in the cell cycle has grown explosively in recent years as a result of the identification of key cell cycle regulators and their substrates Aside from enhancing our understanding of normal cellular growth controls this new knowledge has also been valuable in elucidating mechanisms of growth deregulation which occur in diseased states such as cancer and in some instances viral or parasitic infections The Thirteenth Washington International Spring Symposium was organized with the intention of bringing together scientists working on different aspects of the cell cycle Scientific topics presented ranged from molecular regulators and effectors to mitosis specific changes in cell architecture to the role of the cell cycle in development and disease The goal of this gathering was to help formulate a more comprehensive and integrated picture of events driving and being driven by the cell cycle as well as to evaluate the possibilities for clinical application of this knowledge This symposium held in Washington D C from May 10 14 1993 was attended by more than 400 scientists from 20 countries including many of the scientific leaders in this field This volume contains most of the papers presented at the seven plenary sessions in addition to selected contributions from a total of nine

special oral and poster sessions Growth Factors, Peptides, and Receptors Terry W. Moody, 2012-12-06 The Twelfth Annual Washington Spring Symposium on Health Sciences attracted over 300 scientists from 20 countries It was held at the Lisner Auditorium of the George Washington University in Washington D C during June 1 5 1992 The theme of the meeting was Growth Factors Peptides and Receptors and speakers emphasized both basic and clinical research in these areas The seven plenary sessions emphasized Peptides Growth Factors Peptide Receptors Growth Factor Receptors Second Messengers Proliferation and Clinical Correlations The chapters in this volume are derived from each of these scientific sessions plus the poster and special sessions The Abraham White Distinguished Scientist Award was presented to Dr Solomon H Snyder for his numerous contributions to the field of neurochemistry He presented the keynote address Nitric Oxide A Novel Neuronal Messenger Dr Snyder discussed the pathway of nitric oxide NO synthesis by the enzyme NO synthase Released NO may be responsible for the neuronal toxicity associated with NMDA an excitatory amino acid analogue Dr Snyder noted that NO may be the first of a new class of transmitters with carbon monoxide being another candidate The Distinguished Public Service Award was presented to Senator Fritz Hollings in of his leadership and outstanding achievements in the United States Senate recognition and for his legislative support for biomedical research and education In the symposium banquet address Senator Hollings stressed the need for continued support of research to combat serious diseases such as cancer **Frontiers in Bioactive Lipids** Jack Y.
