

Type-I peptidomimetics or pseudopeptides

6

- ❖ These are synthesized by structure based drug design. These peptidomimetics are closely similar to peptide backbone while retaining functional groups that makes important contacts with binding sites of the receptors.
- ❖ Some units mimic shortportions of secondary structure of peptide for example β -turns and have been used to generate lead compounds. Many early protease inhibitors were designed from substrate/product mimetics of the peptide bond in a transition state or product state for the enzyme-catalyzed reaction.
- ❖ For example Pyrrolinones contains peptide-like side-chains that fit the active sites of most peptidases and also these are resistant to normal proteolysis because they replace amide bonds with metabolically stable units on amino acid unit of parent peptides

Pseudopeptides In Drug Discovery:

Pseudo-peptides in Drug Discovery Peter E. Nielsen, 2006-03-06 Peptides are among the most versatile bioactive molecules yet they do not make good drugs because they are quickly degraded or modified in the body To overcome this problem stable and at the same time biologically active pseudo peptides have been developed These novel compounds open up new perspectives in drug design by providing an entire range of highly specific and non toxic pharmaceuticals This is the first work devoted to the topic and draws together knowledge gained on different types of peptidomimetics and other pseudo peptides with drug properties As such it includes peptoids beta peptides polyamide DNA binders as well as peptide nucleic acids The expert authors and editor discuss chemical properties and stability biological activity and reactivity as well as practical aspects of synthesis making this a prime resource for drug developers and bioorganic chemists working with these compounds

Hydrolysis in Drug and Prodrug Metabolism Bernard Testa, Joachim M. Mayer, 2003-08 Many drugs and other xenobiotics e g preservatives insecticides and plastifiers contain hydrolyzable moieties such as ester or amide groups In biological media such foreign compounds are therefore important substrates for hydrolytic reactions catalyzed by hydrolases or proceeding non enzymatically Despite their significance until now no book has been dedicated to hydrolysis and hydrolases in the metabolism of drugs and other xenobiotics This work fills a gap in the literature and reviews metabolic reactions of hydrolysis and hydration from the point of views of enzymes substrates and reactions

Computer Aided Drug Design in Industrial Research E.C. Herrmann, R. Franke, 2013-03-09 The Ernst Schering Research Foundation sponsored its 15th workshop in Berlin on October 19 21 1994 Leading scientists from Europe and North America were invited to discuss computer aided drug design in industrial research Computer aided drug design is a very exciting field and an intellectual challenge like playing chess But these reasons are no longer sufficient to justify using this method in industry if they ever were Fig 1 The participants of the workshop VI Preface Therefore when we together with Prof Hoyer started to think about this workshop our intentions quickly became clear We were not so much interested in the very latest developments of methods or in computer aided drug design itself enough conferences have dealt with these topics However we were very interested in the usefulness and limitations of computer aided drug design in the

industrial research process A lot has changed in the pharmaceutical industry recently These changes are gaining momentum so it is the right time to think about the role of computer aided drug design in this changing environment
