rays gamma rays and neutrons The natural space environment includes photons and electrons trapped in the Van Allen belt and neutrons heavy ions and cosmic rays found in space      **Radiation Effects Handbook** Institute of Electrical and Electronics Engineers,1963      Handbook of Space-Radiation Effects on Solar-Cell Power Systems National Aeronautics and Space Administration,William C. Cooley,Robert J. Janda,2014-01-30 In order that photovoltaic solar cells may be used more effectively to provide electrical power for spacecraft it is desirable to refine the engineering design of solar cells and power systems based on a better understanding of the space radiation environment and of radiation damage effects on semiconductor components The objective of this handbook is to provide a summary of some of the useful analytical methods and test data which can be applied in designing radiation resistant power systems It is found that the most serious obstacle which prevents accurate prediction of solar cell degradation for earth satellites is our inadequate knowledge of the fluxes and energy spectra of electrons and protons in the magnetosphere When the space environment can be better defined it will be possible to predict more accurately the degradation of present day types of silicon solar cells for which the radiation damage characteristics have been quite well determined by laboratory research As improved types of solar cells and materials become available it will be necessary to make laboratory measurements of their radiation resistance to protons and electrons in order to predict their performance in space Therefore the performance data presented herein may become obsolete However it is hoped that the methods for data correlation and analysis presented here will be an aid to understanding the nature of the problems involved and will be useful in the conduct of engineering analysis      *Effect of Ionizing Radiation on the Chlorination of Mixtures of Rutile, Carbon, and Various Catalysts* Andrew A.
