Recent Advances in Optimization Alberto Seeger, 2006-01-26 The contributions appearing in this book give an overview of recent research done in optimization and related areas such as optimal control calculus of variations and game theory They do not only address abstract issues of optimization theory but are also concerned with the modeling and computer resolution of specific optimization problems arising in industry and applied sciences

Recent Advances in Algorithmic Differentiation Shaun Forth, Paul Hovland, Eric Phipps, Jean Utke, Andrea Walther, 2012-07-30 The proceedings represent the state of knowledge in the area of algorithmic differentiation AD The 31 contributed papers presented at the AD2012 conference cover the application of AD to many areas in science and engineering as well as aspects of AD theory and its implementation in tools For all papers the referees selected from the program committee and the greater community as well as the editors have emphasized accessibility of the presented ideas also to non AD experts In the AD tools arena new implementations are introduced covering for example Java and graphical modeling environments or join the set of existing tools for Fortran New developments in AD algorithms target the efficiency of matrix operation derivatives detection and exploitation of sparsity partial separability the treatment of nonsmooth functions and other high level mathematical aspects of the numerical computations to be differentiated Applications stem from the Earth sciences nuclear engineering fluid dynamics and chemistry to name just a few In many cases the applications in a given area of science or engineering share characteristics that require specific approaches to enable AD capabilities or provide an opportunity for efficiency gains in the derivative computation The description of these characteristics and of the techniques for successfully using AD should make the proceedings a valuable source of information for users of AD tools

Research Trends in Combinatorial Optimization William J. Cook, László Lovász, Jens Vygen, 2008-11-07 The editors and authors dedicate this book to Bernhard Korte on the occasion of his seventieth birthday We the editors are happy about the overwhelming feedback to our initiative to honor him with this book and with a workshop in Bonn on November 3 7 2008

Although this would be a reason to look back we would rather like to look forward and see what are the interesting research directions today This book is written by leading experts in combinatorial optimization All papers were carefully reviewed and eventually twenty three of the invited papers were accepted for this book The breadth of topics is typical for the field combinatorial optimization builds bridges between areas like combinatorics and graph theory submodular functions and matroids network flows and connectivity approximation algorithms and mathematical programming computational geometry and polyhedral combinatorics All these topics are related and they are all addressed in this book Combinatorial optimization is also known for its numerous applications To limit the scope however this book is not primarily about applications although some are mentioned at various places Most papers in this volume are surveys that provide an excellent overview of an active research area but this book also contains many new results Highlighting many of the currently most interesting research directions in combinatorial optimization we hope that this book constitutes a good basis for future research in these areas

Recent Advances in Nonsmooth Optimization Dingzhu Du, Liqun Qi, Robert S. Womersley, 1995 Nonsmooth optimization covers the minimization or maximization of functions which do not have the differentiability properties required by classical methods The field of nonsmooth optimization is significant not only because of the existence of nondifferentiable functions arising directly in applications but also because several important methods for solving difficult smooth problems lead directly to the need to solve nonsmooth problems which are either smaller in dimension or simpler in structure This book contains twenty five papers written by forty six authors from twenty countries in five continents It includes papers on theory algorithms and applications for problems with first order nondifferentiability the usual sense of nonsmooth optimization second order nondifferentiability nonsmooth equations nonsmooth variational inequalities and other problems related to nonsmooth optimization
