Regulating Chemical Accumulation In The Environment:

Regulating Chemical Accumulation in the Environment Timothy M. Swanson, Marco Vighi, 1998-12-10 The environment has become exposed to a range of damaging contaminants from a wide variety of sources Regulation of and legislation against offending parties has frequently been hampered because of the difficulty of co operation between disparate disciplines in the natural social and political sciences This volume forms the conclusion of five years collaboration between toxicologists economists and lawyers in the understanding and solution of the problem of accumulative chemicals As well as a case study of the accumulation of pesticides in groundwater in one particular region the European Union the book forms a general study of the value of interdisciplinary approaches in environmental policy making The volume will be a valuable resource for a broad group of academics and researchers in the area of environmental science and environmental policy It will also form a useful supplementary reference text for courses in environmental policy science economics and toxicology Regulation for Chemical Safety in Europe: Analysis, Comment and Criticism D.M. Pashardes,T.M. Swanson,A. Xepapadeas,2013-04-17 The marginal price elasticities estimated by Martinez Espineira conforms to expectation The price

specification that accounts for the changing proportion of water users in each block yields a higher elasticity 0.47 compared to the specification ignoring this feature of the data. However, this difference is not found to be statistically significant, a result attributed to the low power of the test, small sample size limiting the accuracy of estimates. In conclusion, the paper provides a theoretically correct price specification for demand functions under block pricing and aggregate data. The empirical findings in the paper, however, are not conclusive, and further empirical work using more data and alternative nonlinear demand functions is needed to show the practical implications of the arguments put forward by the Martinez Espineira's paper. Static empirical consumer demand functions estimated with aggregate data are well known to suffer from serial correlation and other statistical problems associated with misspecified dynamics. These dynamics arise because consumers do not react immediately to a change in prices due to their largely predetermined lifestyle. In the case of demand for water, for example, current purchases can be largely predetermined due to commitments arising from past purchases such as swimming pools, bathtubs, dishwashing machines, etc. Muellbauer and Pashardes (1992) show that the autoregressive nature of consumer demand data can be captured in a theoretically consistent manner by incorporating intertemporal aspects of consumer behaviour in the model through habit formation and durability.

Transferable Groundwater Rights Andreas N. Charalambous, 2013-10-28 The principle of transferable groundwater rights is that by making water rights capable of being traded in the market, water resources can be used more sustainably and efficiently. Groundwater would achieve its economic value by switching from the high volume, low value irrigation which is prevalent with many farmers, particularly in South Asia, to low volume, high value urban supply or the growing of intensive horticultural or cash crops. This book discusses transferable groundwater rights in their broader context. It starts with a detailed description of the physical aspects of groundwater which non-technical readers should find useful, followed by a discussion of legal and economic aspects. Water transfers and the international experiences in transferable groundwater rights are dealt with in detail in two subsequent chapters. A model is presented to guide those involved in water resources management and planning in their decision process to introduce transferable groundwater rights and water rights trading. The author concludes that transferable groundwater rights potentially offer a better alternative to land-based water rights systems. However, he casts serious doubt on whether groundwater rights trading on its own can achieve water resources sustainability, environmental protection, and social equity. Government intervention seems to be almost always needed to assist the water rights market and take responsibility for any of its adverse consequences.
