## **Relevant Logic A Philosophical Interpretation:**

*Relevant Logic* Edwin D. Mares, 2004-02-26 This book introduces the reader to relevant logic and provides it with a philosophical interpretation The defining feature of relevant logic is that it forces the premises of an argument to be really used relevant in deriving its conclusion The logic is placed in the context of possible world semantics and situation semantics which are then applied to provide an understanding of the various logical particles especially implication and negation and natural language conditionals The book ends by examining various applications of relevant logic and presenting some interesting open problems      *New Directions in Relevant Logic* Igor Sedlár, Shawn Standefer, Andrew Tedder, 2025-01-30

This book brings together contemporary work on relevant logics to showcase the recent progress of the field and set the stage for future research The papers in the volume contribute to the formal and philosophical development of the field They include contributions from different traditions and approaches ranging from philosophical discussions of the foundations of relevant and related kinds of non classical logic to mathematical work concerning open technical problems in the field This is the first edited collection on the topic in many years and it includes contributions from established figures as well as younger generations of researchers Relevant logics have recently seen a resurgence of interest and this volume will be an important resource for logicians working on substructural and relevant logics for years to come      **J. Michael Dunn on Information**

**Based Logics** Katalin Bimbo, 2016-04-02 This book celebrates and expands on J Michael Dunn s work on informational interpretations of logic Dunn in his Ph D thesis 1966 introduced a semantics for first degree entailments utilizing the idea that a sentence can provide positive or negative information about a topic possibly supplying both or neither He later published a related interpretation of the logic R mingle which turned out to be one of the first relational semantics for a relevance logic An incompatibility relation between information states lends itself to a definition of negation and it has figured into Dunn s comprehensive investigations into representations of various negations The informational view of semantics is also a prominent theme in Dunn s research on other logics such as quantum logic and linear logic and led to the encompassing theory of generalized Galois logics or gaggles Dunn s latest work addresses informational interpretations of the ternary accessibility relation and the very nature of information The book opens with Dunn s autobiography followed by a list of his publications It then presents a series of papers written by respected logicians working on different aspects of information based logics The topics covered include the logic R mingle which was introduced by Dunn and its applications in mathematical reasoning as well as its importance in obtaining results for other relevance logics There are also interpretations of the accessibility relation in the semantics of relevance and other non classical logics using different notions of information It also presents a collection of papers that develop semantics for various logics including certain modal and many valued logics The publication of this book is well timed since we are living in an information age Providing new technical findings intellectual history and careful expositions of intriguing ideas it appeals to a wide audience of scholars and

researchers     **Alasdair Urquhart on Nonclassical and Algebraic Logic and Complexity of Proofs** Ivo Düntsch, Edwin Mares, 2021-09-24 This book is dedicated to the work of Alasdair Urquhart The book starts out with an introduction to and an overview of Urquhart s work and an autobiographical essay by Urquhart This introductory section is followed by papers on algebraic logic and lattice theory papers on the complexity of proofs and papers on philosophical logic and history of logic The final section of the book contains a response to the papers by Urquhart Alasdair Urquhart has made extremely important contributions to a variety of fields in logic He produced some of the earliest work on the semantics of relevant logic He provided the undecidability of the logics R of relevant implication and E of relevant entailment as well as some of their close neighbors He proved that interpolation fails in some of those systems Urquhart has done very important work in complexity theory both about the complexity of proofs in classical and some nonclassical logics In pure algebra he has produced a representation theorem for lattices and some rather beautiful duality theorems In addition he has done important work in the history of logic especially on Bertrand Russell including editing Volume four of Russell s Collected Papers     **Algebraic Perspectives on Substructural Logics** Davide Fazio, Antonio Ledda, Francesco Paoli, 2020-11-07 This volume presents the state of the art in the algebraic investigation into substructural logics It features papers from the workshop ASubL Algebra Substructural Logics Take 6 Held at the University of Cagliari Italy this event is part of the framework of the Horizon 2020 Project SYSMICS SYntax meets Semantics Methods Interactions and Connections in Substructural logics Substructural logics are usually formulated as Gentzen systems that lack one or more structural rules They have been intensively studied over the past two decades by logicians of various persuasions These researchers include mathematicians philosophers linguists and computer scientists Substructural logics are applicable to the mathematical investigation of such processes as resource conscious reasoning approximate reasoning type theoretical grammar and other focal notions in computer science They also apply to epistemology economics and linguistics The recourse to algebraic methods or better the fecund interplay of algebra and proof theory has proved useful in providing a unifying framework for these investigations The ASubL series of conferences in particular has played an important role in these developments This collection will appeal to students and researchers with an interest in substructural logics abstract algebraic logic residuated lattices proof theory universal algebra and logical semantics     David Makinson on Classical Methods for Non-Classical Problems Sven Ove Hansson, 2013-12-20 The volume analyses and develops David Makinson s efforts to make classical logic useful outside its most obvious application areas The book contains chapters that analyse appraise or reshape Makinson s work and chapters that develop themes emerging from his contributions These are grouped into major areas to which Makinsons has made highly influential contributions and the volume in its entirety is divided into four sections each devoted to a particular area of logic belief change uncertain reasoning normative systems and the resources of classical logic Among the contributions included in the volume one chapter focuses on the inferential preferential method i e the combined use of classical logic and mechanisms of

preference and choice and provides examples from Makinson's work in non monotonic and defeasible reasoning and belief revision One chapter offers a short autobiography by Makinson which details his discovery of modern logic his travels across continents and reveals his intellectual encounters and inspirations The chapter also contains an unusually explicit statement on his views on the limited but important role of logic in philosophy     *The Logic of Entailment and its History* Edwin Mares, 2024-02-15 This book provides a new philosophical semantical and historical analysis of and justification for the relevant logic of entailment Its fresh and original perspective on the logic of entailment will be valuable for all who want to know more about the historical and philosophical origins of modern symbolic logic     *Logic, Rationality, and Interaction* Sujata Ghosh, Thomas Icard, 2021-10-03 This LNCS book is part of the FOLLI book series and constitutes the proceedings of the 8th International Workshop on Logic Rationality and Interaction LORI 2021 held in Xi'an China in October 2021 The 15 full papers presented together with 7 short papers in this book were carefully reviewed and selected from 40 submissions The workshop covers a wide range on the following topics such as doxastic and epistemic logics deontic logic intuitionistic and substructural logics voting theory and a new theme emphasized this year causal inference     *Paraconsistency: Logic and Applications* Koji Tanaka, Francesco Berto, Edwin Mares, Francesco Paoli, 2012-07-26 A logic is called paraconsistent if it rejects the rule called *ex contradictione quodlibet* according to which any conclusion follows from inconsistent premises While logicians have proposed many technically developed paraconsistent logical systems and contemporary philosophers like Graham Priest have advanced the view that some contradictions can be true and advocated a paraconsistent logic to deal with them until recent times these systems have been little understood by philosophers This book presents a comprehensive overview on paraconsistent logical systems to change this situation The book includes almost every major author currently working in the field The papers are on the cutting edge of the literature some of which discuss current debates and others present important new ideas The editors have avoided papers about technical details of paraconsistent logic but instead concentrated upon works that discuss more big picture ideas Different treatments of paradoxes takes centre stage in many of the papers but also there are several papers on how to interpret paraconsistent logic and some on how it can be applied to philosophy of mathematics the philosophy of language and metaphysics     *Deflationism and Paradox* JC Beall, Bradley Armour-Garb, 2005-11-10 Deflationist accounts of truth are widely held in contemporary philosophy they seek to show that truth is a dispensable concept with no metaphysical depth However logical paradoxes present problems for deflationists which their work has struggled to overcome In this volume of fourteen original essays a distinguished team of contributors explore the extent to which if at all deflationism can accommodate paradox The volume will be of interest to philosophers of logic philosophers of language and anyone working on truth
