The analysis of biological constructions can not only lead to astonishing technical solutions but can also inspire the design of architecture. Bionics is a fascinating border area between pure research and practical application. Biologists, chemists, physicists, mineralogists and paleontologists meet up with material scientists, engineers and architects and transfer their knowledge to architecture and construction. Using numerous practical examples, this richly illustrated introduction traces the process from the understanding of how something functions to abstraction for example in computer models and the construction of initial prototypes through to fully functional manufacture and production. **Index-catalogue of the Library of the Surgeon General's Office, United States Army (Army Medical Library)** Army Medical Library (U.S.), 1943 **New Remedies** Frederick Albert Castle, Charles Rice, 1876 An illustrated monthly trade journal of materia medica, pharmacy and therapeutics varies
