Organization And Technology In Capitalist Development:

Organization and Technology in Capitalist Development William Lazonick, 1992 A selection of William Lazonick's important work on industrial development in Britain and the United States The first part of the text examines the decline of the British economy and the second part focuses on labour management and technology in the rise and recent decline of the US economy

Technology, Organization, and Competitiveness Giovanni Dosi, David J. Teece, Josef Chytrý, 1998 Comprises ten essays focusing on the complexities and dynamics of firm behaviour organizational structure and corporate strategy

Innovation in Technology, Industries, and Institutions Yūichi Shionoya, Mark Perlman, 1994 In this volume a group of distinguished scholars take up the familiar Schumpeterian theme of innovation They cast it in a new light by emphasizing not technology and innovation in particular industries but rather innovation in institutions and organizational structures They thus cumulatively argue that innovation promotes not only industry but the evolution of society as a whole

Exemplary Economists: North America Roger Backhouse, Roger Middleton, 2000-01-01 Focuses on leading economists who were born or have spent the greater part of their lives in America

Business Organization and the Myth of the Market Economy William Lazonick, 1993-05-28 Explains the transitions in twentieth century industrial leadership in terms of changing business investment strategies and organizational structures

Convergence of Productivity William J. Baumol, Richard R. Nelson, Edward N. Wolff, 1994-06-30 This comprehensive study is a collection of original articles that view the current state of knowledge of the convergence hypothesis The hypothesis asserts that at least since the Second World War and perhaps for a considerable period before that the group of industrial countries was growing increasingly homogeneous in terms of levels of productivity technology and per capita incomes In addition there was general catch up toward the leader with gradual erosion of the gap between the leader country the U S throughout most of the pertinent period and that of the countries lagging most closely behind it The book examines patterns displayed by individual industries within countries as well as the aggregate economies various influences that underlie the process of convergence that seems to have occurred and the role that convergence has played and promises to play in the future of the newly industrialized nations and the less developed countries Much of the analysis is set in a historical perspective with particular attention paid to the record following World War II The prestigious editors conclude that increasing productivity is the key to rising living standards in a globalized marketplace Contributors include Moses Abramovitz Alice M. Amsden Magnus Blomstrom David Dollar Takashi Hikino Gregory Ingram William Lazonick Frank Lichtenberg Robert E. Lipsey Angus Maddison Gavin Wright and Mario Zejan

Technology, Organizations and Innovation: Towards 'real virtuality'? Ian McLoughlin, David Preece, Patrick Dawson, 2000 An authoritative collection of leading critical and contemporary writings published in the field of technology and organizations The set spans a 50 year time period taking the reader from the first and most influential papers from the early 1950s through to some recent publications which address contemporary and emerging debates in the field at the dawn

of the 21st century Each of the 4 volumes has a particular focus upon this area of research and scholarship the early debates theories paradigms and concepts critical empirical studies and emerging themes and future debates The editors provide an introduction to and overview of the themes debates perspectives theories and paradigms which characterize this area of organization studies and set out a route map to help guide the reader through the four volumes

Technology and Industrial Progress G. N. Von Tunzelmann, 1995-01-01 What has dictated the rate and direction of technological change How central has it been to industrial progress How has it related to other determinants of economic growth and development In Technology and Industrial Progress Dr von Tunzelmann examines theoretical views on the nature and contribution of technology and the empirical evidence from the major industrializing countries from the 18th century to the present day The experiences of countries regarded in their time as the leaders of industrialization Britain in the 18th century the United States in the 19th century and Japan in the 20th century are critically compared by the author The following chapters study the transfer of each of these patterns of technology and growth to later industrializers such as continental Europe the Soviet Union and today's newly industrializing countries Adopting approaches drawn from evolutionary economics Dr von Tunzelmann links micro level phenomena relating to individual firms and technologies to macro level outcomes as reflected in economic growth and development This long awaited book is exceptional both in the range of countries surveyed and the breadth of topics analysed encompassing changes in production processes products and marketing management and finance

Technology, Organizations and Innovation: Theories, concepts and paradigms Ian McLoughlin, David Preece, Patrick Dawson, 2000 An authoritative collection of leading critical and contemporary writings published in the field of technology and organizations The set spans a 50 year time period taking the reader from the first and most influential papers from the early 1950s through to some recent publications which address contemporary and emerging debates in the field at the dawn of the 21st century Each of the 4 volumes has a particular focus upon this area of research and scholarship the early debates theories paradigms and concepts critical empirical studies and emerging themes and future debates The editors provide an introduction to and overview of the themes debates perspectives theories and paradigms which characterize this area of organization studies and set out a route map to help guide the reader through the four volumes

Competitive Advantage on the Shop Floor William Lazonick, 1990 William Lazonick explores how technological change has interacted with the organization of work with major consequences for national competitiveness and industrial leadership Looking at Britain the United States and Japan from the nineteenth century to the present he explains changes in their status as industrial superpowers Lazonick stresses the importance for industrial leadership of cooperative relations between employers and shop floor workers Such relations permit employers to use new technologies to their maximum potential which in turn transforms the high fixed costs inherent in these technologies into low unit costs and large market shares Cooperative relations can also lead employers to invest in the skills of workers themselves skills that enable shop floor

workers to influence quality as well as quantity of production To build cooperative shop floor relations successful employers have been willing to pay workers higher wages than they could have secured elsewhere in the economy They have also been willing to offer workers long term employment security These policies Lazonick argues have not come at the expense of profits but rather have been a precondition for making profits Focusing particularly on the role of labor management relations in fostering flexible mass production in Japan since the 1950s Lazonick criticizes those economists and politicians who in the face of the Japanese challenge would rely on free markets alone to restore the international competitiveness of industry in Britain and the United States

Technology, Organizations and Innovation: Critical empirical studies Ian McLoughlin, David Preece, Patrick Dawson, 2000 An authoritative collection of leading critical and contemporary writings published in the field of technology and organizations The set spans a 50 year time period taking the reader from the first and most influential papers from the early 1950s through to some recent publications which address contemporary and emerging debates in the field at the dawn of the 21st century Each of the 4 volumes has a particular focus upon this area of research and scholarship the early debates theories paradigms and concepts critical empirical studies and emerging themes and future debates The editors provide an introduction to and overview of the themes debates perspectives theories and paradigms which characterize this area of organization studies and set out a route map to help guide the reader through the four volumes

Representing Organization Simon Lilley, Geoffrey Lightfoot, Paulo Amaral, 2004 This textbook provides an accessible theoretical analysis of the organizational impact of information technologies It seeks to examine and comment upon the myriad ways in which actors organizations and environments are represented through these technologies Contemporary threats to organizational form and stability are considered alongside the potential that information technologies offer to both exacerbate and overcome them It examines amongst others issues surrounding the material and symbolic aspects of information systems risk and prediction systems implementation and systems success knowledge management practices accountability and other management practices computerized modelling and the virtual organization To this end it deploys a number of different theoretical lenses including systems theory social constructivism labour process theory post structuralism actor network theory These offer complementary and contrasting insights into the computerization of managerial work In order to ensure that the book is both relevant and approachable to students from a range of backgrounds these theories are applied to real examples of the development and implementation of information systems This combination fosters practical knowledge that is theoretically informed The book thus aims to bridge the gap between the abstractions of current theories of organization and the grounded material that forms the bulk of Information Systems literature It thus offers a novel way into the ongoing debates surrounding technological change and the perennial problems of managerial control It has been designed to support

theoretically informed Information and Technology courses at the advanced undergraduate and postgraduate levels and will also be of interest to academics in the fields of Management Information Technology Sociological and Cultural studies

Technology And Social Change In Rural Areas Gene F Summers, 2019-07-11 The possibility of nuclear war the failure of the Green Revolution the capabilities of genetic engineering and other actual and potential effects of technological innovations have created demands for a more humane application of technology Addressing this issue *Technology and Social Change in Rural Areas* is a clear assessment of the current state of affairs The book begins with a discussion of the changing paradigms of technology adoption and diffusion the dynamics of public resistance and the question of social responsibility in an age of synthetic biology In subsequent sections the contributors assess the revolutionary effect of technology on agriculture worldwide and conclude that radically new public policies are essential expose the transformations of rural life and communities that result from the localized effects of technology and its use as a weapon in world system politics and critically examine the appropriate technology movement The essays are presented to honor Professor Eugene A Wilkening for his many pioneering and lasting contributions to the study of technology and rural social change The book includes an intellectual biography of Professor Wilkening written by his long time colleague and friend William H Sewell **Technology**

and Oligopoly Capitalism Luis Suarez-Villa, 2023-04-14 *Technology and Oligopoly Capitalism* is a major contribution to our understanding of how technology oligopolies are shaping America s social economic and political reality Technology oligopolies are the most powerful socioeconomic entities in America From cradle to grave the decisions they make affect the most intimate aspects of our lives how we work what we eat our health how we communicate what we know and believe whom we elect and how we relate to one another and to nature Their power over markets trade regulation and most every aspect of our governance is more intrusive and farther reaching than ever They benefit from tax breaks government guarantees and bailouts that we must pay for and have no control over Their accumulation of capital creates immense wealth for a minuscule elite deepening disparities while politics and governance become ever more subservient to their power They determine our skills and transform employment through the tools and services they create as no other organizations can

They produce a vast array of goods and services with labor marketing and research that are more intrusively controlled than ever as workplace rights and job security are curtailed or disappear. Our consumption of their products and their capacity to promote wants is deep and far reaching while the waste they generate raises concerns about the survival of life on our planet. And their links to geopolitics and the martial domain are stronger than ever as they influence how warfare is waged and who will be vanquished. Technology and Oligopoly Capitalism's critical multidisciplinary perspective provides a systemic vision of how oligopolistic power shapes these forces and phenomena. An inclusive approach spans the spectrum of technology oligopolies and the ways in which they deploy their power. Numerous previously unpublished ideas expand the repertory of established work on the topics covered, advancing explanatory quality to elucidate how and why technology oligopolies operate as they do, the dysfunctions that accompany their power, and their effects on society and nature. This book has no peers in the literature in its scope, the unprecedented amount and diversity of documentation, the breadth of concepts, and the vast number of examples it provides. Its premises deserve to be taken into account by every student, researcher, policymaker, and author interested in the socioeconomic and political dimensions of technology in America. Renewing Destruction

Alexander A. Dunlap, 2019-06-21. Renewing Destruction examines how wind energy projects impact people and their environments. Wind energy development in Mexico and most countries fall into a roll-out neoliberal strategy that is justified by climate change mitigation programs that are continuing a process of land and wind resources grabbing for profit. The result has been an exaggeration of pre-existing problems in communities: around land, income inequality, local politics, and contrary to public relations stories, is devastating traditional livelihoods and socio-ecological relationships. Exacerbating pre-existing social and material problems in surrounding towns, wind energy development is placing greater stress on semi-subsistence communities, marginalizing Indigenous traditions, and indirectly resulting in the displacement and migration of people into urban centers. Based on intensive fieldwork with local groups in Oaxaca, Mexico, this book provides an in-depth study demonstrating the complications and problems that emerge with the current regime of sustainable development and wind energy projects in Mexico, which has wider lessons to be drawn for other regions and countries. Put simply, the book reveals a tragic reality that calls into question the marketed hopes of the green economy and the current method of climate change mitigation. It shows the variegated impacts and issues associated with building wind energy parks, which extends to recognizing the destructive effects on Indigenous cultures and practices in the region. The book, however, highlights what to consider or more importantly, what to avoid if one is working with industrial-scale wind energy systems. **Organizing &**
