Guidelines for Design of Low-Rise Buildings Subjected to Lateral Forces Ajaya Kumar Gupta, Peter James Moss, 2020-11-25 *Guidelines for Design of Low Rise Buildings Subjected to Lateral Forces* is a concise guide that identifies performance issues concerns and research needs associated with low rise buildings The book begins with an introduction that discusses special problems with low rise buildings subjected to wind and earthquakes Chapter 2 examines probabilistic methods and their use in evaluating risks from natural hazards It also addresses the characteristics of wind and seismic forces and levels of risk implied by building codes Wind forces are covered in more detail in Chapter 3 with discussions of wind force concepts and wind structure interactions Chapter 4 is devoted to earthquake forces and traces the development of building codes for earthquake resistant design Chapter 5 describes the main framing systems used to resist lateral forces and discusses the code requirements for drift control The designs and requirements for connections between building elements

are addressed in Chapter 6 It includes examples along with several illustrations of suitable connections The performance of non structural elements during wind and earthquake forces is also examined in detail This book serves as an important reference for civil engineers construction engineers architects and anyone concerned with structural codes and standards It is an excellent guide that can be used to supplement design recommendations and provide a design basis where there are no current requirements

Proceedings of the International Conference on Earthquake Engineering and Structural Dynamics Rajesh Rupakhety, Simon Olafsson, Bjarni Bessason, 2018-06-30 This book includes a collection of chapters that were presented at the International Conference on Earthquake Engineering and Structural Dynamics ICESD held in Reykjavik Iceland between 12-14 June 2017 The contributions address a wide spectrum of subjects related to wind engineering earthquake engineering and structural dynamics Dynamic behavior of ultra long span bridges that are discussed in this volume represent one of the most challenging and ambitious contemporary engineering projects Concepts principles and applications of earthquake engineering are presented in chapters addressing various aspects such as ground motion modelling hazard analysis structural analysis and identification design and detailing of structures risk due to non structural components and risk communication and mitigation The presented chapters represent the state of the art in these fields as well as the most recent developments

Protecting Your Home Or Small Business From Disasters Fema, 2005-12 A constant stream of news stories remind us that disasters can disrupt our lives and damage our homes and businesses with little or no notice This independent study course will address different types of hazards and describe specific measures that you can take to protect your home or place of business No prior knowledge of the subject is assumed This course will provide a foundation of knowledge that will enable you to Explain how protective measures can reduce or eliminate long term risks to your home and personal property from hazards and their effects Explain how protective measures for small businesses secure people business property and building structures and prevent business loss following a natural disaster Describe different types of natural disasters Describe hazards that pose a risk to your home or small business

Interactive Data Processing and 3D Visualization of the Solid Earth Daniel Patel,2022-02-21 This book presents works detailing the application of processing and visualization techniques for analyzing the Earth s subsurface The topic of the book is interactive data processing and interactive 3D visualization techniques used on subsurface data Interactive processing of data together with interactive visualization is a powerful combination which has in the recent years become possible due to hardware and algorithm advances in The combination enables the user to perform interactive exploration and filtering of datasets while simultaneously visualizing the results so that insights can be made immediately This makes it possible to quickly form hypotheses and draw conclusions Case studies from the geosciences are not as often presented in the scientific visualization

and computer graphics community as e.g. studies on medical biological or chemical data. This book will give researchers in the field of visualization and computer graphics valuable insight into the open visualization challenges in the geosciences and how certain problems are currently solved using domain specific processing and visualization techniques. Conversely, readers from the geosciences will gain valuable insight into relevant visualization and interactive processing techniques. Subsurface data has interesting characteristics such as its solid nature, large range of scales and high degree of uncertainty which makes it challenging to visualize with standard methods. It is also noteworthy that parallel fields of research have taken place in geosciences and in computer graphics with different terminology when it comes to representing geometry, describing terrains, interpolating data and example based synthesis of data. The domains covered in this book are geology, digital terrains, seismic data, reservoir visualization and CO₂ storage. The technologies covered are 3D visualization, visualization of large datasets, 3D modelling, machine learning, virtual reality, seismic interpretation and multidisciplinary collaboration. People within any of these domains and technologies are potential readers of the book.

Human-Computer Interaction and Knowledge Discovery in Complex, Unstructured, Big Data Andreas Holzinger, Gabriella Pasi, 2013-06-26. This book constitutes the refereed proceedings of the Third Workshop on Human Computer Interaction and Knowledge Discovery HCI/KDD 2013 held in Maribor, Slovenia in July 2013 at SouthCHI 2013. The 20 revised papers presented were carefully reviewed and selected from 68 submissions. The papers are organized in topical sections on human computer interaction and knowledge discovery, knowledge discovery and smart homes, smart learning environments and visualization, data analytics.
