Generating Images of Stratification Thomas J. Fararo, Kenji Kosaka, 2003-08-31 Generating Images of Stratification is a self contained presentation of a theoretical research program that deals with a significant explanatory problem relating to social inequality and that constructs generative theoretical models in doing so In more detail Self contained presentation In respect to the background sociological facts and theoretical ideas and also the formal methods the book provides clear and simple accounts accompanied by examples A theoretical research program The emphasis is on theory development involving a series of theoretical models constructed within a core framework of principles and methods Deals with a significant explanatory problem relating to social inequality We know from research that how people perceive the stratification system of a society depends upon their position in that system So the problem is What process generates this regularity and thereby explains empirical generalizations about the social structuration of images Constructs generative theoretical models The book is an extended presentation of generative theory in sociology a formal method of producing effective theoretical explanations Generating Images of Stratification is of interest to mathematical sociologists and formal theorists in sociology sociologists interested in social stratification methodologists both in sociology and in other fields philosophers of social science and theoretical scientists and mathematicians who are interested in applying their analytical tools to social science topics

Deep Generative Models Anirban Mukhopadhyay, Ilkay Oksuz, Sandy Engelhardt, Dorit Mehroff, Yixuan Yuan, 2025-09-24 This book constitutes the proceedings of the 5th Workshop on Deep Generative Models for Medical Image Computing and Computer Assisted Intervention DGM4MICCAI 2025 held in conjunction with the 28th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2025 in Daejeon South Korea during September 2025 The 33 papers presented in this book were carefully reviewed and selected from 50 submissions These papers deal with recent algorithmic developments new results and promising future directions in Deep Generative Models

Image and Geometry Processing for 3-D Cinematography Rémi Ronfard, Gabriel Taubin, 2010-06-29 papers illustrated with examples They include wavelet bases implicit functions defined on a space grid etc It appears that a common

pattern is the recovery of a controllable model of the scene such that the resulting images can be edited interaction Changing the viewpoint is only one important aspect but changing the lighting and action is equally important 2 Recording and representing three dimensional scenes is an emerging technology made possible by the convergence of optics geometry and computer science with many applications in the movie industry and more generally in entertainment Note that the invention of cinema camera and projector was also primarily a scientific invention that evolved into an art form We suspect the same thing will probably happen with 3 D movies 3 Book Contents The book is composed of 12 chapters which elaborate on the content of talks given at the BANFF workshop The chapters are organized into three sections The first section presents an overview of the inter relations between the art of cinematography and the science of image and geometry processing the second section is devoted to recent developments in geometry and the third section is devoted to recent developments in image processing 3 1 3 D Cinematography and Applications The first section of the book presents an overview of the inter relations between the art of cinematography and the science of image and geometry processing

3D-TV System with Depth-Image-Based Rendering Ce Zhu,Yin Zhao,Lu Yu,Masayuki Tanimoto,2012-08-15 Riding on the success of 3D cinema blockbusters and advances in stereoscopic display technology 3D video applications have gathered momentum in recent years 3D TV System with Depth Image Based Rendering Architectures Techniques and Challenges surveys depth image based 3D TV systems which are expected to be put into applications in the near future Depth image based rendering DIBR significantly enhances the 3D visual experience compared to stereoscopic systems currently in use DIBR techniques make it possible to generate additional viewpoints using 3D warping techniques to adjust the perceived depth of stereoscopic videos and provide for auto stereoscopic displays that do not require glasses for viewing the 3D image The material includes a technical review and literature survey of components and complete systems solutions for technical issues and implementation of prototypes The book is organized into four sections System Overview Content Generation Data Compression and Transmission and 3D Visualization and Quality Assessment This book will benefit researchers developers engineers and innovators as well as advanced undergraduate and graduate students working in relevant areas
