

## A few words about European research infrastructures (including e-Infrastructures) in the H2020 (... short reminder).

Research infrastructures are high level facilities, resources and services (provided through a legal institute / e.g. "ERIC") that are used by the research communities to conduct research and foster innovation in their fields (where relevant, they may be used beyond research, e.g. for education or public services).

**NOTE:**European Research Infrastructure Consortium (ERIC) is a specific legal form to facilitate the establishment and operation of research infrastructures with European interest.

Research infrastructures are also key in helping Europe to lead a global movement towards open, interconnected, data-driven and computer-intensive science and engineering.

e-Infrastructures will make every European researcher digital, increasing creativity and efficiency of research and bridging the divide between developed and less developed regions.

**Integrating Activities of ERI** (with respect to the European Charter for Access to Research Infrastructures) shall combine, in a closely co-ordinated manner:

- (i) **Networking activities**, to foster a culture of co-operation between research infrastructures, scientific communities, industries and other stakeholders as appropriate, and to help develop a more efficient and attractive European Research Area;
- (ii) **Trans-national access or virtual access activities**, to support scientific communities in their access to the identified key research infrastructures;
- (iii) **Joint research activities**, to improve, in quality and/or quantity, the integrated R&D services provided at European level by the infrastructures.

All three categories of activities are mandatory as synergistic effects are expected from these different components.
