Space Exploration Reference Library , The Literature of Space Science and Exploration Mildred Benton,1958
Space Exploration Nita Mallick,2016-12-15 Humankind's venture into the final frontier began with stargazing and continues to this day But the greatest achievements have been recent Readers will discover how the scientific theories of figures like Isaac Newton inspired the advancements of Hermann Oberth a founder of modern astronautics and Robert Hutchings Goddard the father of modern rocketry Mathematical equations and physics lessons that fit well into Common Core standards explain the principles these pioneers shaped Alluring images coupled with astonishing explanations and snippets of particularly involved analysis of figures and achievements offer readers a stimulating history of space exploration

A Visual Guide to Space Exploration Alberto Hernández Pamplona,2017-07-15 Few frontiers have inspired human imagination as much as the final frontier outer space What seemed impossible a mere hundred years ago has now been accomplished as humans have sent astronauts into orbit and onto the moon and rovers and satellites continue to travel farther out beaming invaluable data about our universe back to Earth This illustration packed title covers the most outstanding events since humans landed on the moon Missions to the different planets are presented as are images and details of space stations satellites and Mars rovers Even reluctant readers won't be able to stay away from this visual delight

Conrad,2019-05-01 From telescopes to rockets to robots see all the ways people have explored space Where will space exploration take us next Path To Transformational Space Exploration, The (In 2 Volumes) Philip Lubin,2022-03-14 In this book professor Lubin lays out the fundamental physics and mathematics required to radically alter our capabilities in propulsion to enable extremely high speed space flight both in our solar system and beyond The case is made that the only currently viable solution to enable this transformation including relativistic flight for the first interstellar robotic missions is using large scale directed energy Traditional methods of propulsion are not capable of achieving the speed required for rapid missions in our solar system including fast crewed missions to Mars as well

as the many robotic missions desired both in our solar system and to the nearest stars Humanity has now reached a technological tipping point with the ability to project power over vast distances with transformational implications in a wide variety of areas from propulsion to beaming power throughout our solar system to planetary defence In a series of over 50 technical papers the fundamentals of this transformation are outlined and synthesized in this book allowing a detailed understanding of the many challenges ahead and a roadmap to the future direction for human exploration far beyond our solar system While the road ahead is long and challenging it provides the path to radically altering humanity's future in ultra high speed space exploration

In-Space Manufacturing and Resources Volker Hessel, Jana Stoudemire, Hideaki Miyamoto, Ian D.
