**Francesca Woodman's Dark Gaze** Claire Raymond,2016-05-20 Focusing on the later work of the American photographer Francesca Woodman 1958 1981 Claire Raymond takes up the question of the disintegrative condition of the art she produced in the last year of her life Departing from the techniques of her earlier compositions Woodman worked in the diazotype process for many of these late pieces most importantly the monumental Blueprint for a Temple Raymond shows

that through her use of diazotype a medium that breaks down when exposed to light Woodman created art that is both supremely evocative aesthetically and inherently unstable physically Woodman Raymond contends was imaginatively responding to the end of the durable image a historical reality acknowledged in the way her work plays the ephemeral and evanescent against the monumental and enduring Raymond focuses on the theoretical and the curatorial issues surrounding Woodman s diazotypes a thematic and practical distress that haunts much of her later art especially the artist s book and photo series Some Disordered Interior Geometries and Portrait of a Reputation Rather than conceiving of Woodman herself as fragile an artist chronicling and seeming to yearn for her own disappearance Raymond juxtaposes Woodman s career spanning documentation of her own image against other post war witnesses of trauma an artist standing in the museum ruins where she emerges most distinctly as a figure of postmodernity

*Luxury Home Plans* , **Group Colorings and Bernoulli Subflows** Su Gao,Stephen C Jackson,Brandon

Seward, 2016-04-26 In this paper the authors study the dynamics of Bernoulli flows and their subflows over general countable groups. One of the main themes of this paper is to establish the correspondence between the topological and the symbolic perspectives. From the topological perspective the authors are particularly interested in free subflows, subflows in which every point has trivial stabilizer, minimal subflows, disjointness of subflows, and the problem of classifying subflows up to topological conjugacy. Their main tool to study free subflows will be the notion of hyper-aperiodic points: a point is hyper-aperiodic if the closure of its orbit is a free subflow.
