Feferman on Foundations Gerhard Jäger,Wilfried Sieg,2018-04-04 This volume honours the life and work of Solomon Feferman one of the most prominent mathematical logicians of the latter half of the 20th century In the collection of essays presented here researchers examine Feferman s work on mathematical as well as specific methodological and philosophical issues that tie into mathematics Feferman s work was largely based in mathematical logic namely model theory set theory proof theory and computability theory but also branched out into methodological and philosophical issues making it well known beyond the borders of the mathematics community With regard to methodological issues Feferman supported concrete projects On the one hand these projects calibrate the proof theoretic strength of subsystems of analysis and set theory and provide ways of overcoming the limitations imposed by Gödel s incompleteness theorems through appropriate conceptual expansions On the other they seek to identify novel axiomatic foundations for mathematical practice truth theories and category theory In his philosophical research Feferman explored questions such as What is logic and proposed particular positions regarding the foundations of mathematics including for example his conceptual structuralism The contributing authors of the volume examine all of the above issues Their papers are accompanied by an autobiography presented by Feferman that reflects on the evolution and intellectual contexts of his work The contributing authors critically examine Feferman s work and in part actively expand on his concrete mathematical projects The volume illuminates Feferman s distinctive work and in the process provides an enlightening perspective on the foundations of mathematics and logic

Mathesis Universalis, Computability and Proof Stefania Centrone, Sara Negri, Deniz Sarikaya, Peter M. Schuster, 2019-10-25 In a fragment entitled Elementa Nova Matheseos Universalis 1683 Leibniz writes the mathesis shall deliver the method through which things that are conceivable can be exactly determined in another fragment he takes the mathesis to be the science of all things that are conceivable Leibniz considers all mathematical disciplines as branches of the mathesis and conceives the mathesis as a general science of forms applicable not only to magnitudes but to every object that exists in our imagination i e that is possible at least in principle As a general science of forms the mathesis investigates possible relations between arbitrary objects objets quelconques It is an abstract theory of combinations and relations among objects whatsoever In 1810 the mathematician and philosopher Bernard Bolzano published a booklet entitled Contributions to a Better Grounded Presentation of Mathematics There is according to him a certain objective connection among the truths that are germane to a certain homogeneous field of objects some truths are the reasons Grnde of others and the latter are consequences Folgen of the former The reason consequence relation seems to be the counterpart of causality at the level of a relation between true propositions Arigorous proof is characterized in this context as a proof that shows the reason of the proposition that is to be proven Requirements imposed on rigorous proofs seem to anticipate normalization results in current proof theory The contributors of Mathesis Universalis Computability and Proof leading experts in the fields of computer science mathematics logic and philosophy show the evolution of these and related ideas exploring topics in proof theory computability theory intuitionistic logic constructivism and reverse mathematics delving deeply into a contextual examination of the relationship between mathematical rigor and demands for simplification *Ways of Proof Theory* Ralf Schindler, 2013-05-02 On the occasion of the retirement of Wolfram Pohlers the Institut f r Mathematische Logik und

Grundlagenforschung of the University of Münster organized a colloquium and a workshop which took place July 17-19 2008. This event brought together proof theorists from many parts of the world who have been acting as teachers, students and collaborators of Wolfram Pohlers and who have been shaping the field of proof theory over the years. The present volume collects papers by the speakers of the colloquium and workshop and they produce a documentation of the state of the art of contemporary proof theory.

Logical Foundations of Computer Science Sergei Artemov, 2009-02-13. This book constitutes the refereed proceedings of the International Symposium on Logical Foundations of Computer Science LFCS 2009 held in Deerfield Beach, Florida, USA, in January 2008. The volume presents 31 revised refereed papers carefully selected by the program committee. All current aspects of logic in computer science are addressed, including constructive mathematics and type theory, logical foundations of programming, logical aspects of computational complexity, logic programming and constraints, automated deduction and interactive theorem proving, logical methods in protocol and program verification and in program specification and extraction, domain theory, logics, logical foundations of database theory, equational logic and term rewriting, lambda and combinatory calculi, categorical logic and topological semantics, linear logic, epistemic and temporal logics, intelligent and multiple agent system logics, logics of proof and justification, nonmonotonic reasoning, logic in game theory and social software, logic of hybrid systems, distributed system logics, system design logics, as well as other logics in computer science.
