

A sepia-toned photograph of a desk. In the background, a vintage typewriter is visible. In the foreground, an open book lies flat, with a pair of round-rimmed glasses resting on its right page. To the left of the open book, a stack of several closed books is visible, their spines showing some text and a small crest. The lighting is warm and focused on the desk items, creating a scholarly atmosphere.

Robbins,2001-11-29 Chronicling Louis Pasteur s rise from humble beginnings to international fame Louis Pasteur and the

Hidden World of Microbes investigates the complex life of a man who revolutionized our understanding of disease. Alongside Pasteur's pioneering work with microorganisms, his innovative use of heat to kill harmful organisms in food, a process now known as pasteurization, and his development of the rabies vaccine, Louise Robbins places Pasteur in the context of his risky scientific methods and his rigid family and political beliefs. Robbins reveals a man of genius with sometimes troubling convictions. *Louis Pasteur and the Hidden World of Microbes* is a fascinating look at one of the most important scientific minds of the last two centuries. *Oxford Portraits in Science* is an ongoing series of scientific biographies for young adults. Written by top scholars and writers, each biography examines the personality of its subject as well as the thought process leading to his or her discoveries. These illustrated biographies combine accessible technical information with compelling personal stories to portray the scientists whose work has shaped our understanding of the natural world. [Facing Gaia](#) Bruno Latour, 2017-09-05 The emergence of modern sciences in the seventeenth century profoundly renewed our understanding of nature. For the last three centuries, new ideas of nature have been continually developed by theology, politics, economics, and science, especially the sciences of the material world. The situation is even more unstable today now that we have entered an ecological mutation of unprecedented scale. Some call it the Anthropocene, but it is best described as a new climatic regime. And a new regime, it certainly is, since the many unexpected connections between human activity and the natural world oblige every one of us to reopen the earlier notions of nature and redistribute what had been packed inside. So the question now arises: what will replace the old ways of looking at nature? This book explores a potential candidate proposed by James Lovelock when he chose the name Gaia for the fragile complex system through which living phenomena modify the Earth. The fact that he was immediately misunderstood proves simply that his readers have tried to fit this new notion into an older frame, transforming Gaia into a single organism, a kind of giant thermostat, some sort of New Age goddess, or even divine Providence. In this series of lectures on natural religion, Bruno Latour argues that the complex and ambiguous figure of Gaia offers, on the contrary, an ideal way to disentangle the ethical, political, theological, and scientific aspects of the now obsolete notion of nature. He lays the groundwork for a future collaboration among scientists, theologians, activists, and artists as they and we begin to adjust to the new climatic regime. *Louis Pasteur* Sue Vander Hook, 2011-01-01 This title examines the remarkable life of Rupert Murdoch. Readers will learn about Murdoch's family background, childhood, education, and groundbreaking work as the media mogul behind a major news corporation. Color photos and informative sidebars accompany easy-to-read, compelling text. Features include a table of contents, timeline, facts, additional resources, Web sites, a glossary, a bibliography, and an index. *Essential Lives* is a series in *Essential Library*, an imprint of ABDO Publishing Company.
