Measurements of Important Minor Constituents in the Middle Atmosphere John J. Olivero, PENNSYLVANIA STATE UNIV UNIVERSITY PARK IONOSPHERE RESEARCH LAB., 1979 This final report summarizes two major projects The first is the design and development of a ground based microwave radiometer for the measurement of water vapor in the middle atmosphere The second is the detailed study of the possible existence of small ice particles in the mesosphere under normal conditions as has been hypothesized by D region electrical structure measurements Author
The Neutral Upper Atmosphere S.N. Ghosh, 2013-03-09 After World War II Professor S K Mitra wrote a comprehensive book called The Upper Atmosphere which dealt with information available from ground based and balloon borne experiments As a result topics such as day airglow were investigated and further ground based experiments using incoherent back scattering were carried out These activities resulted in new information on the ozonosphere The dramatic discovery of ozone holes forms a new and exciting chapter in the discovery of atmospheric processes While dealing with the limits of the atmosphere reference may be made to interstellar molecules whose discovery has raised considerable scientific curiosity Knowledge of the solar terrestrial relationship advanced a great deal when more information on solar radiation became available by measuring higher energy photons in the UV EUV and even X ray regimes All this information is incorporated in this volume and presented under the title The Neutral Upper Atmosphere

remote sensing has played a key role in monitoring atmospheric ozone concentration and determining the success of the Montreal Protocol in protecting the ozone layer from further damage In this book the renowned authors discuss the sophisticated instruments that have been launched into space to study not only ozone but also other trace gases in the atmosphere some of which play a key role in the generation and destruction of ozone in the atmosphere Professors Cracknell and Varotsos also examine the satellite flown instruments which are involved in monitoring the absorption of solar ultraviolet light in the atmosphere in relation both to the generation and destruction of ozone and consequently to human health This scholarly book written by the foremost experts in the field looks at remote sensing and its employment in the various aspects of ozone science It is widely acknowledged that global warming due to anthropogenic greenhouse gases emissions represents a threat to the sustainability of human life on Earth However many other threats are potentially just as serious including atmospheric pollution ozone depletion water pollution the degradation of agricultural land deforestation the depletion of the world s mineral resources and population growth
