Optimal Algorithms International Symposium Varna Bulgaria May 29 June 2 1989 Lecture Notes In Computer Science:

Optimal Algorithms Hristo Djidjev, 1989-11-08 This volume brings together papers from various fields of theoretical computer science including computational geometry parallel algorithms algorithms on graphs data structures and complexity of algorithms Some of the invited papers include surveys of results in particular fields and some report original research while all the contributed papers report original research Most of the algorithms given are for parallel models of computation The papers were presented at the Second International Symposium on Optimal Algorithms held in Varna Bulgaria in May June 1989 The volume will be useful to researchers and students in theoretical computer science especially in parallel computing

Clustering and Classification Phipps Arabie, Geert de Soete, 1996 At a moderately advanced level this book seeks to cover the areas of clustering and related methods of data analysis where major advances are being made Topics include hierarchical clustering variable selection and weighting additive trees and other network models relevance of neural network models to clustering the role of computational complexity in cluster analysis latent class approaches to cluster analysis theory and method with applications of a hierarchical classes model in psychology and psychopathology combinatorial data analysis clusterwise aggregation of relations review of the Japanese language results on clustering review of the Russian language results on clustering and multidimensional scaling practical advances and significance tests The Cumulative Book Index, 1990 A world list of books in the English language

Limits to Parallel Computation Raymond Greenlaw, H. James Hoover, Walter L. Ruzzo, 1995-04-06 This book provides a comprehensive analysis of the most important topics in parallel computation It is written so that it may be used as a self study guide to the field and researchers in parallel computing will find it a useful reference for many years to come The first half of the book consists of an introduction to many fundamental issues in parallel computing The second half provides lists of P complete and open problems These lists will have lasting value to researchers in both industry and academia The lists of problems with their corresponding remarks the thorough index and the hundreds of references add to the exceptional value of this resource While the exciting field of parallel computation continues to expand rapidly this book serves as a guide to research done through 1994 and also describes the fundamental concepts that new workers will need to know in coming years It is intended for anyone interested in parallel computing including senior level undergraduate students graduate students faculty and people in industry As an essential reference the book will be needed in all academic libraries

Optimal Recovery B. Bojanov, H. Woźniakowski, 1992 Invited and selected talks from the Second International Symposium on Optimal Algorithms held in Varna Bulgaria May June 1989 cover different aspects of the problem of recovery of functions and functionals on the basis of partial information The papers are mainly oriented on best approximation

information based complexity and optimal numerical Elements of the General Theory of Optimal Algorithms Ivan V. Sergienko, Valeriy K. Zadiraka, Oleg M. Lytvyn, 2022-01-11 In this monograph the authors develop a methodology that allows one to construct and substantiate optimal and suboptimal algorithms to solve problems in computational and applied mathematics Throughout the book the authors explore well known and proposed algorithms with a view toward analyzing their quality and the range of their efficiency The concept of the approach taken is based on several theories of computations of optimal algorithms of interpolation interpolation and interpolation of functions to name several Theoretical principles and practical aspects of testing the quality of algorithms and applied software are a major component of the exposition The computer technology in construction of efficient algorithms for computing solutions to problems of computational and applied mathematics is also explored The readership for this monograph is aimed at scientists postgraduate students advanced students and specialists dealing with issues of developing algorithmic and software support for the solution of problems of computational and applied mathematics

Moiseev, 1970-01-01 *Optimal Algorithms* Hristo Djidjev, 2014-01-15 Algorithms for Continuous Optimization E. Spedicato, 2012-12-06 The NATO Advanced Study Institute on Algorithms for continuous optimization the state of the art was held September 5-18 1993 at II Ciocco Barga Italy It was attended by 75 students among them many well known specialists in optimization from the following countries Belgium Brasil Canada China Czech Republic France Germany Greece Hungary Italy Poland Portugal Rumania Spain Turkey UK USA Venezuela The lectures were given by 17 well known specialists in the field from Brasil China Germany Italy Portugal Russia Sweden UK USA Solving continuous optimization problems is a fundamental task in computational mathematics for applications in areas of engineering economics chemistry biology and so on Most real problems are nonlinear and can be of quite large size Developing efficient algorithms for continuous optimization has been an important field of research in the last 30 years with much additional impetus provided in the last decade by the availability of very fast and parallel computers Techniques like the simplex method that were already considered fully developed thirty years ago have been thoroughly revised and enormously improved The aim of this ASI was to present the state of the art in this field While not all important aspects could be covered in the fifty hours of lectures for instance multiobjective optimization had to be skipped we believe that most important topics were presented many of them by scientists who greatly contributed to their development

A General Theory of Optimal Algorithms Joseph Frederick Traub, H. Woźniakowski, 1980 The purpose of this monograph is to create a general framework for the study of optimal algorithms for problems that are solved approximately For generality the setting is abstract but we present many applications to practical problems and provide examples to illustrate concepts and major theorems The work presented here is motivated by research in many fields Influential have been questions concepts and results from complexity theory
