transport. Aimed at students and early career engineers, this highly practical and visual resource guides the reader through computer simulations using the Monte Carlo Method, which can be applied to a variety of applications including power generation, criticality assemblies, nuclear detection systems, and nuclear medicine, to name a few. The book covers optimization in both the traditional deterministic framework of variational methods and the stochastic framework of Monte Carlo methods. Specific sections cover the fundamentals of nuclear physics, computer codes used for neutron and photon radiation transport simulations, applications of analyses and simulations, optimization techniques for both fixed source and multiplying systems, and various simulations in the medical area where radioisotopes are used in cancer treatment. Provides a highly visual and practical reference that includes mathematical modeling, formulations, models, and methods throughout. Includes all current major computer codes such as ANISN, MCNP, and MATLAB for user coding and analysis. Guides the reader through simulations for the design optimization of both present-day and future nuclear systems.

Computational Intelligence Applied to Inverse Problems in Radiative Transfer Antônio José da Silva Neto, José Carlos Becceneri, Haroldo Fraga de Campos Velho, 2023-12-12

This book offers a careful selection of studies in optimization techniques based on artificial intelligence applied to inverse problems in radiative transfer. In this book, the reader will find an in-depth exploration of heuristic optimization methods, each meticulously described and accompanied by historical context and natural process analogies. From simulated annealing and genetic algorithms to artificial neural networks and colony optimization and particle swarms, this volume presents a wide range of heuristic methods. Additional approaches such as generalized extreme optimization, particle collision, differential evolution, Luus-Jaakola, and firefly algorithms are also discussed, providing a rich repertoire of tools for tackling challenging problems. While the applications showcased primarily focus on radiative transfer, their potential extends to various domains, particularly nonlinear and large-scale problems where traditional deterministic methods fall short. With clear and comprehensive presentations, this book empowers readers to adapt each method to their specific needs. Furthermore, practical examples of classical optimization problems and application suggestions are included to enhance your understanding. This book is suitable to any researcher or practitioner whose interests lie on optimization techniques based in artificial intelligence and bio-inspired algorithms in fields like Applied Mathematics, Engineering, Computing, and cross-disciplinary areas.
