Handbook of Reading

Research, Volume IV Michael L. Kamil, P. David Pearson, Elizabeth Birr Moje, Peter Afflerbach, 2011-03-17 The Handbook of Reading Research is the research Handbook for the field Each volume has come to define the field for the period of time it covers Volume IV follows in this tradition The editors extensively reviewed the reading research literature since the publication of Volume III in 2000 as portrayed in a wide array of research and practitioner based journals and books to identify the themes and topics covered As in previous volumes the focus is on reading research rather than a range of literate practices When taken as a set the four volumes provide a definitive history of reading research Volume IV brings the field authoritatively and comprehensively up to date

Clinical Neuropsychological Assessment Robert L. Mapou, Jack Spector, 2013-06-29 Practicing neuropsychologists and students in clinical neuropsychology must increasingly cross disciplinary boundaries to understand and appreciate the neuroanatomical neurophysiological and neuropharmacological bases of cognition and behavior current cognitive theory in many different domains of functioning and the nature and tools of clinical assessment Although the cognitive functions and abilities of interest are often the same each of these fields has grappled with them from sometimes very different perspectives Terminology is often specific to a particular discipline or ap

proach methods are diverse and the goals or outcomes of study or investigation are usually very different This book poises itself to provide a largely missing link between traditional approaches to assessment and the growing area of cognitive neuropsychology Historically neuropsychology had as its central core the consideration of evidence from clinical cases It was the early work of neurologists such as Broca Wernicke Hughlings Jackson and Liepmann who evaluated and described the behavioral correlates of prescribed lesions in individual patients and focused investigation on the lateralization and localization of cognitive abilities in humans An outgrowth of those approaches was the systematic development of experimental tasks that could be used to elucidate the nature of cognitive changes in individuals with well described brain lesions
