

1. What is the correct IUPAC name of the following compound?

- a. 2-isopropylbutanal
- b. 2-ethyl-3-methylbutanal
- c. 2-isopropylbutanone
- d. 3-ethyl-2-methylbutanal

Correct Answer: B

Explanation: When naming aldehydes, you always want to change the -e from the parent name to -al. For example, hexane will be switched to hexanal if an aldehyde is present. We can already eliminate c, because we are not dealing with any ketones as our functional group. You always want to start where the carbonyl double bond is, so

that would be 1.

Now that the compound is numbered look at the answer choices. A cannot be the answer because there is no isopropyl group on carbon 2. Also, it's missing the other substituent of carbon 3. Answer choice B, makes the most sense, because answer choice D would mean that the carbonyl double bond would not be given the smallest number. You can never assign the larger number to the aldehyde, ketone, double bond, or triple bond; always try to give it the smallest number.

2. Rank the compounds in order of decreasing reactivity with LiAlH_4

Organic Chemistry Education Research into Practice Jay Wackerly, Sarah Zingales, Michael Wentzel, Gautam Bhattacharyya, Brett McCollum, 2025-03-25 This Research Topic has three main goals 1 provide a platform for instructors of organic chemistry to showcase evidence based methods and educational theories they have utilized in their classrooms 2 build new and strengthen existing connections between educational researchers and practitioners and 3 highlight how people have used chemical education based research in their teaching practice There are places in the literature dedicated for chemical education research CER however there is not a clear avenue for those that have changed their teaching methods based on

published CER and report their experiences Creating this article collection will foster collaboration between chemical education researchers and teachers of organic chemistry This opportunity allows these instructors to share evidence based practices experiences challenges and innovative approaches from CER literature and beyond This Research Topic bridges discipline based education research and the scholarship of teaching and learning which will help advance organic chemistry education and improve student outcomes
