Why We Disagree about Climate Change Mike Hulme, 2009-04-30 Climate change is not a problem waiting for a solution. It is an environmental, cultural, and political phenomenon which is re-shaping the way we think about ourselves, our societies, and humanity's place on Earth. Drawing upon twenty-five years of professional work as an international climate change scientist and public commentator, Mike Hulme provides a unique insider's account of the emergence of this phenomenon and the diverse ways in which it is understood. He uses different standpoints from science, economics, faith, psychology, communication, sociology, politics, and development to explain why we disagree about climate change. In this way, he shows that climate change, far from being simply an issue or a threat, can act as a catalyst to revise our perception of our place in the world. *Why We Disagree About Climate Change* is an important contribution to the ongoing debate over climate change and its likely impact on our lives.

Planning for Climate Change Simin Davoudi, Jenny Crawford, Abid Mehmood, 2009 This resource provides authoritative guidance for spatial planners on how to meet the economic, social, and environmental challenges that climate change raises for urban and regional development. Lean and Cleaner Production Peng Wu, Sui Pheng Low, 2013-12-18 This book explains how, in moving towards Cleaner Production, the Lean Production Philosophy can be applied to reduce carbon emissions in prefabrication, one major source of the Greenhouse Gas (GHG) emissions which contribute to global climate change. This book examines theories and principles in the Lean Production Philosophy to develop situation-based carbon reduction strategies for precast concrete manufacturers and contractors in terms of Site layout, Supply Chain, Production, Stocks, and Installation Management. It presents the empirical findings of surveys and case studies with managers and professionals working for precasters and contractors in Singapore, findings which provide good practical guidance for precast concrete manufacturers and contractors to achieve low carbon emissions and to perform better in many sustainability-based rating systems such as the Singapore Green Labelling Scheme and the Building and Construction Authority (BCA) Green Mark Scheme.

Economic Growth and Sustainable Development Peter N. Hess, 2013-04-26 Economic growth, reflected in increases in national output per capita, makes possible an improved material standard of living. Sustainable development, popularly and concisely defined as meeting the needs of the present generations without compromising the ability of future generations to meet their needs, directly addresses the utilization of natural resources, the state of the environment, and intergenerational equity. Fundamental questions addressed in this textbook include: What causes economic growth? Why do some countries grow faster than others? What accounts for the extraordinary growth in the world's population over the past two centuries? What are the current trends in population, and will these trends continue? Are there limits to economic growth and population growth due to

resource constraints and environmental thresholds Is sustainable development compatible with economic growth Can sustainable development be attained without addressing the extreme poverty that afflicts over a billion of the world s population This interdisciplinary textbook uses a blend of formal models empirical evidence history and policy to provide a coherent and comprehensive treatment of economic growth and sustainable development **Handbook of Research on**
