Summary

Public acceptance is recognised as an important issue shaping the widespread implementation of renewable energy technologies and the achievement of energy policy targets. Furthermore, it is commonly assumed that 'public attitudes' need to change to make more radical scenarios about the implementation of renewable energy technologies feasible. This chapter critically summarises existing social research on the acceptance of renewable energy technologies, and provides a novel classification of personal, psychological and contextual factors that combine to shape public acceptance. It concludes by arguing the need for more systematic research on public acceptance driven by coherent theoretical frameworks drawn from psychology and other social science disciplines, explicit definitions of concepts, the use of innovative methodological tools and a greater emphasis upon symbolic and affective aspects.

1: Introduction to social and psychological research

Concerns about energy security and climate change are driving significant changes in how energy, and electricity specifically, is generated, transmitted and consumed in the UK. The 2003 Energy White Paper contains a commitment to reduce carbon emissions by 60% by 2050, in comparison to 1990 levels, and aims for 20% of total electricity generation to be generated by renewable resources by 2020 (Department of Trade and Industry, 2003). Such targets necessitate that low carbon technologies for generating energy, including renewable energy technologies that generate electricity from wind, sun, biomass and ocean sources, become commonplace, rather than 'alternative', as is currently the case. There are many factors that will determine the successful implementation of renewable energy technologies, one of which is widely assumed to be 'public acceptance' (e.g. Ekins, 2004), given that in the recent past, there has been widespread local opposition towards renewable energy developments, particularly wind and biomass (Toke, 2005; Upham and Shackley, 2005; Warren, Lumsden, O'Dowd and Birnie, 2005). This recognition that public acceptability is a necessary condition of technology development and diffusion demands a deeper understanding of social and psychological processes, since our current level of understanding of public views about, and responses to renewable energy technologies, the local experience of resistance and consent and the ways in which public engagement with renewable energy technologies is constructed and practised in the UK, is both limited and restricted, excepting a few case-studies of onshore wind development (e.g. Simon, 1996).

Empirical studies of public views about renewable energy technologies have, with a small number of exceptions, typically used a quantitative research methodology and targeted views about renewable energy generally (often through large scale opinion polls), or views about the siting of renewable energy technologies in a particular location (typically through smaller scale
