Performance Measurement Luca Quaglini, Stefano Tonchia, 2010-08-24 Business Intelligence BI and Performance Management PM the development and delivery of business insight for users and the management of execution based on that insight are two solution types that promise to bring great value to enterprises Yet most organizations haven't yet realized the elusive benefits of these two important disciplines The reasons for this are manifold However the

primary causes are the culture of the organization and its leadership. This is a topic which I've addressed at length in my latest book *Pro les in Performance Business Intelligence Journeys and the Roadmap for Change*. The culture and leadership of the organization determines the importance and strategic intent surrounding the use of BI and PM. Sadly most organizations lack the motivation to embrace transparency and accountability or to align with the strategy of the organization enabling execution and coordination in unison with the mission. However once an organization and its leadership are ready to take a step towards real change creating an environment of openness sharing and alignment with BI and PM as its centerpiece the next question then becomes one of how and where to begin. Even with great strategic intent missteps in the development and deployment of BI and PM can cause disillusionment and disappointment lending support to the naysayers of the organization and leading to failure and abandonment of these critical programs.

Measuring Information Technology Investment Payoff Mo Adam Mahmood, Edward J.

Szewczak, 1999-01-01 It would seem that business investment in information technology IT is at root no different from business investment in anything else After a careful consideration of the costs of the investment and its anticipated benefits a decision is made as to whether the benefits of the investment outstrip the costs and by how much If the benefits are competitive with other investment alternatives say a major marketing campaign then the business will commit financial resources to the IT proposal Otherwise it won't This decision making process is at the heart of capital budgeting Senior executives have been making IT investment decisions for well over three decades So why is the measurement of IT investment payoff so difficult and controversial Why do we need a book dealing with contemporary approaches to measuring IT investment payoff Why have earlier approaches to measuring IT investment payoff proven unsatisfactory In what respects have earlier approaches fallen short Do we need to scrap earlier approaches entirely or can we find important improvements to these approaches such that they can be newly applied to effectively measure IT investment payoff in ways that are convincing to senior management This book will help you to find improvements in existing methods for measuring IT investment payoff as well as to find new innovative methods for addressing the value of emerging IT
