Service Life Prediction Jonathan W. Martin, 2002 This is a comprehensive overview of recent progress in the development and application of modern service life prediction strategies to coatings and other polymeric materials Topics covered include the effects of weather variability novel light sources effects of acid precipitation and exposure angle on weathering new techniques for measuring time of wetness and methods for following the chemical and mechanical degradation of organic coatings and other polymeric materials There

is also a section devoted to the understanding of degradation and stabilization processes as well as methods for manipulating the large amounts of data generated in service life studies **Development of A High Throughput Method , Stability and Degradation of Organic and Polymer Solar Cells** Frederik C. Krebs, 2012-04-02 Organic photovoltaics OPV are a new generation of solar cells with the potential to offer very short energy pay back times mechanical flexibility and significantly lower production costs compared to traditional crystalline photovoltaic systems A weakness of OPV is their comparative instability during operation and this is a critical area of research towards the successful development and commercialization of these 3rd generation solar cells Covering both small molecule and polymer solar cells Stability and Degradation of Organic and Polymer Solar Cells summarizes the state of the art understanding of stability and provides a detailed analysis of the mechanisms by which degradation occurs Following an introductory chapter which compares different photovoltaic technologies the book focuses on OPV degradation discussing the origin and characterization of the instability and describing measures for extending the duration of operation Topics covered include Chemical and physical probes for studying degradation Imaging techniques Photochemical stability of OPV materials Degradation mechanisms Testing methods Barrier technology and applications Stability and Degradation of Organic and Polymer Solar Cells is an essential reference source for researchers in academia and industry engineers and manufacturers working on OPV design development and implementation
