Havin, Nikolai K. Nikolski, 2006-12-08 The 2 volume book is an updated reorganized and considerably enlarged version of the previous edition of the Research Problem Book in Analysis LNM 1043 a collection familiar to many analysts that has sparked off much research This new edition created in a joint effort by a large team of analysts is like its predecessor a collection of unsolved problems of modern analysis designed as informally written mini articles each containing not only a statement of a problem but also historical and methodological comments motivation conjectures and discussion of possible connections of plausible approaches as well as a list of references There are now 342 of these mini articles almost twice as many as in the previous edition despite the fact that a good deal of them have been solved      **Books in Print Supplement**, 1988      **Encyclopedia of Statistical Sciences, Volume 3**, 2005-12-16 Countless professionals and students who use statistics in their work rely on the multi volume Encyclopedia of Statistical Sciences as a superior and unique source of information on statistical theory methods and applications This new edition available in both print and on line versions is designed to bring the encyclopedia in line with the latest topics and advances made in statistical science over the past decade in areas such as computer intensive statistical methodology genetics medicine the environment and other applications Written by over 600 world renowned experts including the editors the entries are self contained and easily understood by readers with a limited statistical background With the publication of this second edition in 16 printed volumes the Encyclopedia of Statistical Sciences retains its position as a cutting edge reference of choice for those working in statistics biostatistics quality control economics sociology engineering probability theory computer science biomedicine psychology and many other areas      **The Legacy of the Inverse Scattering Transform in Applied Mathematics** J. L. Bona, Roy Choudhury, David Kaup, 2002 Swift progress and new applications characterize the area of solitons and the inverse scattering transform There are rapid developments in current nonlinear optical technology Larger intensities are more

available pulse widths are smaller relaxation times and damping rates are less significant In keeping with these advancements exactly integrable soliton equations such as 3 wave resonant interactions and second harmonic generation are becoming more and more relevant in experimental applications Techniques are now being developed for using these interactions to frequency convert high intensity sources into frequency regimes where there are no lasers Other experiments involve using these interactions to develop intense variable frequency sources opening up even more possibilities This volume contains new developments and state of the art research arising from the conference on the Legacy of the Inverse Scattering Transform held at Mount Holyoke College South Hadley MA Unique to this volume is the opening section Reviews This part of the book provides reviews of major research results in the inverse scattering transform IST on the application of IST to classical problems in differential geometry on algebraic and analytic aspects of soliton type equations on a new method for studying boundary value problems for integrable partial differential equations PDEs in two dimensions on chaos in PDEs on advances in multi soliton complexes and on a unified approach to integrable systems via Painlevé analysis This conference provided a forum for general exposition and discussion of recent developments in nonlinear waves and related areas with potential applications to other fields The book will be of interest to graduate students and researchers interested in mathematics physics and engineering
