Several Complex Variables And Complex Geometry:

Several Complex Variables and Complex Geometry, Part I Eric Bedford, 1991 Several Complex Variables and Complex Geometry Eric Bedford, John P. D'Angelo, Robert E. Greene, Steven George Krantz, 1991 *Several Complex Variables and Complex Geometry*, 1991 Several Complex Variables with Connections to Algebraic Geometry and Lie Groups Joseph L. Taylor, 2002 This text presents an integrated development of core material from several complex variables and complex algebraic geometry leading to proofs of Serre's celebrated GAGA theorems relating the two subjects and including applications to the representation theory of complex semisimple Lie groups It includes a thorough treatment of the local theory using the tools of commutative algebra an extensive development of sheaf theory and the theory of coherent analytic and algebraic sheaves proofs of the main vanishing theorems for these categories of sheaves and a complete proof of the finite dimensionality of the cohomology of coherent sheaves on compact varieties The vanishing theorems have a wide variety of applications and these are covered in detail Of particular interest are the last three chapters which are devoted to applications of the preceding material to the study of the structure theory and representation theory of complex semisimple Lie groups Included are introductions to harmonic analysis the Peter Weyl theorem Lie theory and the structure of Lie algebras semisimple Lie algebras and their representations algebraic groups and the structure of complex semisimple Lie groups All of this culminates in Milicic's proof of the Borel-Weil-Bott theorem which makes extensive use of the material developed earlier in the text There are numerous examples and exercises in each chapter This modern treatment of a classic point of view would be an excellent text for a graduate course on several complex variables as well as a useful reference for the expert

Analysis and Geometry in Several Complex Variables Gen Komatsu, Masatake Kuranishi, 1999-07-15 This volume consists of a collection of articles for the proceedings of the 40th Taniguchi Symposium Analysis and Geometry in Several Complex Variables held in Katata Japan on June 23-28 1997 Since the inhomogeneous Cauchy-Riemann equation was introduced in the study of Complex Analysis of Several Variables there has been strong interaction between Complex Analysis and Real Analysis in particular the theory of Partial Differential Equations Problems in Complex Analysis stimulate the development of the PDE theory which subsequently can be applied to Complex Analysis This interaction involves Differential Geometry for instance via the CR structure modeled on the induced structure on the boundary of a complex manifold Such structures are naturally related to the PDE theory Differential Geometric formalisms are efficiently used in settling problems in Complex Analysis and the results enrich the theory of Differential Geometry This volume focuses on the most recent developments in this interaction including links with other fields such as Algebraic Geometry and Theoretical Physics Written by participants in the Symposium this volume treats various aspects of CR geometry and the Bergman kernel projection together with other major subjects in modern Complex Analysis We hope that this volume will serve as a resource for all who are interested in the new trends in this area We would like to express our gratitude to the Taniguchi Foundation for

generous financial support and hospitality We would also like to thank Professor Kiyosi Ito who coordinated the organization of the symposium

Several Complex Variables and the Geometry of Real Hypersurfaces John P. D'Angelo, 2019-07-16

Several Complex Variables and the Geometry of Real Hypersurfaces covers a wide range of information from basic facts about holomorphic functions of several complex variables through deep results such as subelliptic estimates for the Neumann problem on pseudoconvex domains with a real analytic boundary The book focuses on describing the geometry of a real hypersurface in a complex vector space by understanding its relationship with ambient complex analytic varieties You will learn how to decide whether a real hypersurface contains complex varieties how closely such varieties can contact the hypersurface and why it is important The book concludes with two sets of problems routine problems and difficult problems many of which are unsolved

Principal prerequisites for using this book include a thorough understanding of advanced calculus and standard knowledge of complex analysis in one variable

Several Complex Variables and the Geometry of Real Hypersurfaces will be a useful text for advanced graduate students and professionals working in complex analysis

Several Complex Variables III G M Khenkin, Jaak Peetre, I M Dektyarev, 1989-02-23

The first contribution describes basic concepts facts and problems of the modern theory of entire functions of several complex variables The second contribution deals with analogies of basic Nevanlinna's theorems about the distribution of values in the multidimensional case and various applications The third contribution is devoted to invariant metrics and volumes and their applications in problems of function theory of several variables The fourth contribution touches upon various results concerning the rigidity of holomorphic mappings of complex spaces beginning with classical Liouville's and Picard's theorems Contribution five presents results concerning extension of holomorphic mappings to the boundaries of domains and results about correspondence of boundaries and equivalence of domains with respect to biholomorphic mappings Contribution six dwells on the problem of biholomorphic equivalence of manifolds in this differential geometric aspect The last contribution reviews applications of multidimensional complex geometry in modern physical theories supergravitation and supergauge fields This volume will be useful to complex analysts and physicists It is rounded off by an extensive bibliography
