Mathematics Learning in Early Childhood National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Committee on Early Childhood Mathematics,2009-12-13 Early childhood mathematics is vitally important for young children s present and future educational success Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics Furthermore young children enjoy their early informal experiences with mathematics Unfortunately many children s potential in mathematics is not fully realized especially those children who are economically disadvantaged This is due in part to a lack of opportunities to learn

mathematics in early childhood settings or through everyday experiences in the home and in their communities
 Improvements in early childhood mathematics education can provide young children with the foundation for school success
 Relying on a comprehensive review of the research Mathematics Learning in Early Childhood lays out the critical areas that
 should be the focus of young children s early mathematics education explores the extent to which they are currently being
 incorporated in early childhood settings and identifies the changes needed to improve the quality of mathematics experiences
 for young children This book serves as a call to action to improve the state of early childhood mathematics It will be
 especially useful for policy makers and practitioners those who work directly with children and their families in shaping the
 policies that affect the education of young children *The Publishers' Trade List Annual* ,1985 **Catalog of Copyright**
