Macroeconomic Modelling:

A History of Macroeconometric Model-building Ronald G. Bodkin, Lawrence Robert Klein, Kanta Marwah, 1991 This major book presents for the first time an authoritative history of developments in macroeconometric modelling since the 1930s. It focuses in particular on the construction of mathematical statistical models of entire economies estimated from national accounts and other macroeconomic data. International and comparative in scope, the book contains chapters prepared by specialists from the different countries concerned. This landmark book is indispensable to an understanding of the history and development of large scale econometric models of modern economies. The Econometrics of Macroeconomic Modelling Gunnar Bårdsen, Øyvind Eitrheim, Eilev Jansen, Ragnar Nymoen, 2005-04-14 Macroeconometric models in many ways the flagships of the economist's profession in the 1960s came under increasing attack from both theoretical economists and practitioners in the late 1970s. Critics referred to their lack of microeconomic theoretical foundations, ad hoc models of expectations, lack of identification, neglect of dynamics and non stationarity and poor forecasting properties. By the start of the 1990s the status of macroeconometric models had declined markedly and had fallen completely out of and with academic economics. Nevertheless, unlike the dinosaurs to which they often have been likened, macroeconometric models have never completely disappeared from the scene. This book describes how and why the discipline of macroeconometric modelling continues to play a role for economic policymaking by adapting to changing demands in response for instance to new policy regimes like inflation targeting. Model builders have adopted new insights from economic theory and taken advantage of the methodological and conceptual advances within time series econometrics over the last twenty years. The modelling of wages and prices takes a central part in the book as the authors interpret and evaluate the last forty years of international research experience in the light of the Norwegian main course model of inflation in a small open economy. The preferred model is a dynamic model of incomplete competition which is evaluated against alternatives as diverse as the Phillips curve, Nickell-Layard wage curves, the New Keynesian Phillips curve and monetary inflation models on data from the Euro area, the UK and Norway. The wage-price core model is built into a small econometric model for Norway to analyse the transmission mechanism and to evaluate monetary policy rules. The final chapter explores the main sources of forecast failure likely to occur in a practical modelling situation using the large scale model RIMINI and the inflation models of earlier chapters as case studies. **A Course in Macroeconomic Modelling and Forecasting** John D. Whitley, 1994 This textbook is a thorough introduction to the theory and practice of macroeconomic modelling. It provides a rigorous exposition of the theory of modelling and examines the main UK and European macroeconomic models. Policy relevant conclusions are drawn from the models including new areas such as wealth effects and rational expectations. The text compares UK macroeconomic models with key US and European models with an emphasis on policy analysis and the ERM. Analyses in Macroeconomic Modelling Andrew J. Modelling has undergone radical changes in the last few years. There has been considerable innovation in developing robust solution techniques for the new breed of increasingly complex models. Similarly, there has been a growing consensus on their long run and dynamic properties as well as much development on existing themes such as modelling expectations and policy rules. This edited volume focuses on those areas which have undergone the most significant and imaginative developments and brings together the very best of modelling practice. We include specific sections on I Solving Large Macroeconomic Models II Rational Expectations and Learning Approaches III Macro Dynamics and IV Long Run and Closures. All of the contributions offer new research whilst putting their developments firmly in context and as such will influence much future research in the area. It will be an invaluable text for those in policy institutions as well as academics and advanced students in the fields of economics, mathematics, business and government. Our contributors include those working in central banks, the IMF, European Commission and established academics.

Macroeconomic Modelling, Economic Policy and Methodology Mikael Randrup Byrialsen, Hamid Raza, Finn Olesen, 2022-10-27. Demonstrating that there are superior alternatives to the modern macroeconomic mainstream and its DSGE dynamic stochastic general equilibrium models, this book presents the cutting edge in macroeconomic modelling, economic policy and methodology from the perspective of heterodox economic thinking. The first part of the book explores methodological issues, advocating for a stronger ethical consideration in macroeconomics and for the adoption of a strategy of pluralism to ensure that macroeconomic theory is capable of adapting to real world issues. The second part highlights recent trends in empirical Stock Flow Consistent models by collecting a group of the most well developed empirical models of five different economies: the Danish, the Dutch, the French, the Italian and the Argentinian models. In all five cases, the models are used to discuss various policy aspects of the individual economies. Finally, the book explores issues of macroeconomic policy which are largely neglected by mainstream economists, including financial stability and macro imbalances. The book emphasizes the need for investigating sectoral balances which are crucial elements for investigating imbalances from the heterodox perspective. This book will be of significant interest to students and scholars of macroeconomics, economic modelling, economic methodology and heterodox economics more broadly.

Challenges for Macroeconomic Modelling W. Driehuis, M.M.G. Fase, H. den Hartog, 2014-06-28. This book collects the revised and edited proceedings of the conference held in honour of the 50th anniversary of Professor Tinbergen's first macroeconomic policy model. Written by experts both in the field of model building and policy analysis, the contributions provide an invaluable overview of the state of the art and the use of macroeconomic models in our time.

Dynamic Econometrics For Empirical Macroeconomic Modelling Ragnar Nymoen, 2019-07-09. For Masters and PhD students in Economics. In this textbook, the duality between the equilibrium concept used in dynamic economic theory and the stationarity of economic variables is explained and used in the presentation of single equations models and systems of equations such as VARs, recursive models and simultaneous equations models. The book also contains chapters on exogeneity.

Rational Expectations in Macroeconomic Models P. Fisher, 2013-04-17 It is commonly believed that macroeconomic models are not useful for policy analysis because they do not take proper account of agents expectations Over the last decade mainstream macroeconomic models in the UK and elsewhere have taken on board the Rational Expectations Revolution by explicitly incorporating expectations of the future In principle one can perform the same technical exercises on a forward expectations model as on a conventional model and more Rational Expectations in Macroeconomic Models deals with the numerical methods necessary to carry out policy analysis and forecasting with these models These methods are often passed on by word of mouth or confined to obscure journals Rational Expectations in Macroeconomic Models brings them together with applications which are interesting in their own right There is no comparable textbook in the literature The specific subjects include i solving for model consistent expectations ii the choice of terminal condition and time horizon iii experimental design i e the effect of temporary vs permanent anticipated vs unanticipated shocks deterministic vs stochastic dynamic vs static simulation iv the role of exchange rate v optimal control and inflation output tradeoffs The models used are those of the Liverpool Research
