Macrolepidoptera of Fiji and Rotuma Gaden Sutherland Robinson, 1975 *Lepidoptera of Norfolk Island. Their Biogeography and Ecology* Jeremy Daniel Holloway, 1977-08-31 **The Families of Malesian Moths and Butterflies** Jeremy Holloway, Geoffrey Kibby, Djunijanti Pegg, 2021-10-01 The Families of Malesian Moths and Butterflies provides a compendium of detailed information on the rich diversity of moths and butterflies of Malesia. It includes not only a key to the families and some subfamilies and field hints for the identification of larval stages but also deals with their biology, biogeography, phylogeny, and classification and provides guidance for their collection and study. Families that are reported or suspected to occur in Malesia are described in some depth with a reference section intended to include as comprehensive a list as possible of the key works to the fauna. **Volume 1: Evolution, Systematics, and Biogeography** Niels P. Kristensen, Andreas Schmidt-Rhaesa, 2013-02-06 Covering 100 years of zoological research, the Handbook of Zoology represents a vast store of knowledge. The Handbook of Zoology provides an in-depth treatment of the entire animal kingdom, covering both invertebrates and vertebrates. It publishes comprehensive overviews on animal systematics and morphology and covers extensively further aspects like physiology, behavior, ecology, and applied zoological research. Although our knowledge regarding many taxonomic groups has grown enormously over the last decades, it is still the objective of the Handbook of Zoology to be comprehensive in the sense that text and references together provide a solid basis for further research. Editors and authors seek a balance between describing species richness and diversity, explaining the importance of certain groups in a phylogenetic context, and presenting a review of available knowledge and up-to-date references. New contributions to the series present the combined effort of an international team of editors and authors, entirely published in English and tailored to the needs of the international scientific community. Upcoming volumes and projects in progress include volumes on Annelida, Volumes 1-3: Bryozoa, Mammalia, Miscellaneous Invertebrates, Nannomecoptera, Neomecoptera, and Strepsiptera, and are followed later by fishes, reptiles, and further volumes on mammals. Background: The renowned German reference work Handbook of Zoology was founded in the 1920s by Professor Willi K. Krenthel in Berlin and treated the complete animal kingdom from single-cell organisms to mammals in eight thematic volumes: Volume I: Protozoa, Porifera, Ctenophora, Mesozoa; 1925 Volume II: Vermes; 1933-34 Volume III: Arthropoda ex Insecta; 1927-1932 Volume IV: Arthropoda Insecta; Volume V: Solenogastres, Mollusca, Echinodermata; 1925 Volume VI: Pisces, Amphibia; 1930 Volume VII: Reptilia, Aves; 1931 Volume VIII: Mammalia. The Volumes IV: Arthropoda Insecta and VII: Mammalia continued publication into the present with the most recent contributions in English language. Adapting to the accelerating speed of scientific discovery in the past decades, the Handbook of Zoology entered a next phase in 2010. In the new edition of the Handbook of Zoology, the original eight thematic volumes gave way for smaller and more flexible groupings that reflect the current state of phylogenetic knowledge. All subsequent volumes were published in print as well as e-book format. The Handbook of Zoology is additionally offered as a

database the Handbook of Zoology Online which can easily be searched and rapidly updated Original Handbook material ca 28 000 pages has been reordered along taxonomic instead of bibliographical categories and forms the historical basis of this Online Reference Work As a living Online Reference the content is continuously updated and new content added The material can be accessed through taxonomic and subject categories as well as free text with a diversity of linking and search options Faster publication times through online first publication reference and cross linking and make the Handbook of Zoology highly attractive to both authors and users Catalogue of Theses and Dissertations Relating to Fiji & Rotuma William

Foottit,Peter H. Adler,2009-03-03 Insect Biodiversity Science and Society brings together leading scientific experts to

assess the impact insects have on humankind and the earth's fragile ecosystems. It examines why insect biodiversity matters and how the rapid evolution of insect species is affecting us all. Insects and related arthropods make up more than 50 percent of the known animal diversity globally, yet a lack of knowledge about insects is hindering the advance of science and society. This book explores the wide variety in type and number of insect species and their evolutionary relationships. Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population and also examine the consequences that an increased loss of insect species will have on the world. The book concludes that a better understanding of the biology and ecology of insects is the only way to sustainably manage ecosystems in an ever-changing global environment.

The Biodiversity of Microorganisms and Invertebrates D. L. Hawksworth, 1991 *The Entomologist's Record and Journal of Variation* James William Tutt, 2011 *A Survey of the Lepidoptera, Biogeography and Ecology of New Caledonia* J.D. Holloway, 2012-12-06 I spent four months in New Caledonia in 1971 with the object of making a quantitative survey of the night flying macrolepidoptera with light traps and an assessment of the Rhopalocera and microlepidoptera. This fieldwork was financed by a Government Grant in Aid for Scientific Investigations administered by the Royal Society and by a grant from the Godman Fund. I devoted a further three weeks to sampling on Norfolk I and with the help of local naturalists Mr and Mrs F JOWETT was able to produce a detailed account of the biogeography and ecology of the moth fauna. HOLLOWAY 1977 This book is an account of the results of the New Caledonian work together with reviews of the geology, phytogeography and general zoogeography presented as background for the Lepidoptera fauna and its geography. Previous work on the macroheterocera primarily papers by VIETTE 1948 1971 had recorded not many more than a hundred species, a very low total considering the area of the island relative to that of the Fiji group where the moths were being studied by Dr G S ROBINSON when the New Caledonian expedition was at the planning stage. The Fijian fauna then promised considerably to exceed three hundred species. Evidently many more species awaited discovery in New Caledonia.

Minami Taiheiyō kaiiki chōsa kenkyū hōkoku, Australian Journal of Zoology, 1953 **Butterflies of the Solomon Islands** W. John Tennent, 2002 **A Bibliography of Pacific Island Theses and Dissertations** William George Coppel, Susan Stratigos Wilson, 1983 *High Altitude Tropical Biogeography* François Vuilleumier, Maximina Monasterio, 1986 High Altitude Tropical Biogeography provides research workers and academics with a comprehensive overview of the biogeography of high tropical mountains covering the origin, ecology and evolution of plants and animals of this unique ecological zone. The climate in the high altitude mountain regions of the tropics is cold, resulting in flora and fauna which more closely resemble their counterparts thousand of miles to the north or south than comparable species in the lowland jungles only a few thousand meters below. These ecological islands, besides being very important to the economies of the tropics, pose interesting questions of physiological adaptation, biogeography and evolutionary relationships. With contributions from twenty-four international specialists who have devoted years to the study of cold mountain tropics, this

book describes some of the most characteristic plant and animal components of the ecosystem No other book of this scope and content exists on these tropical biotas
