Non-Classical Continuum Mechanics R. J. Knops, A. A. Lacey, 1987-09-24 This volume contains a selection of the invited papers presented at a LMS Durham Symposium on modern developments in non classical continuum mechanics A major aim was to bring together workers in both the abstract and practical aspects of the subject in order to achieve enhanced appreciation of each others approach and hence of the mathematical techniques and physical intuition essential for successful research in this field As a result the present collection consists of a series of concise articles which are introductions to and succinct accounts of current activity in many branches of non classical continuum mechanics Research workers in applied mathematics physics theoretical mechanics and structural and aeronautical engineering will find much of interest in this collection **Physics Briefs**, 1986 **Macroscopic Properties of Disordered Media. Macroscopic Properties of Disordered Media, 1982 *Subject Catalog* Library of Congress, **Monographic Series** Library of Congress, 1982 **Topological Disorder in Condensed Matter** F. Yonezawa, T. Ninomiya, 2012-12-06 This volume contains papers presented at the Fifth Taniguchi Symposium on the Theory of Condensed Matter which was held between 2 5 November 1982 at Shimoda Japan The topic of the Symposium was Topological Disorder in Condensed Matter The objective of the Taniguchi Symposium is to encourage activity in those fields of research not in the limelight at the moment but regarded as very promising such as our theme Topological disorder refers to the dis order in the positions and connectivities of atoms in amorphous solids and liquids The development of the physiCS of topologically disorderd systems though extremely important fundamentally and for application purposes falls far behind compared to that of other kinds of

disordered systems because the structure characterization of topologically disordered systems is still at a rather primitive stage. The structure characterization is the key to comprehensive understanding of physical properties of any material. Recently several new attempts at structural analyses have been reported. Encouraged by this fact, our motivation in organizing the symposium was to investigate the possibilities of theoretical approaches to open a breakthrough in the present research situation on this subject. A rough sketch of the problem is made in the Introduction to give the readers a general outline of the subject. Part I is devoted to several attempts to synthesize and characterize topological disorder more or less by analytical means.
