Book Index ,1992 A world list of books in the English language      *Nature's Balancing Act* Ken Hicks,2025-04-30 Are the physical laws of our universe finely tuned such that life can exist What does this imply about how our universe formed Questions like these are examined in Nature s Balancing Act presented for a wide audience From the Big Bang to present day research ranging from gravitational waves to experiments on antimatter our physical laws are shown to be slightly off balance allowing life to exist In its opening chapters the following is asked What would happen if the strong nuclear force which binds protons and neutrons together were slightly stronger or weaker Would life still be possible We know today that pushing the nuclear force off balance by just a few percent would create a different universe unlike our own Also for life to exist there must be a slight imbalance in the way matter and antimatter were created in the Big Bang If matter and antimatter were exactly in balance then our universe would not exist These are just two examples of the fine tuning of physical laws that must happen for the cosmological conditions to be right for life to exist If the universe wasn t just so you wouldn t be here to read about it Even with a favorable universe how did life on Earth begin How did it survive all this time without being wiped out by a cosmic event Can human life continue to exist for millions of years or will we cause our own extinction These topics are considered in the latter chapters of the book and provide a fascinating look at our existence on Earth and the possibility of life elsewhere      *Mathematical Solution Unifying the Four Fundamental Forces in Nature* Richard Lighthouse,2013-08-14 This technical note describes a simple mathematical geometrical solution for unifying the four fundamental forces in nature The fundamental forces of gravitation electromagnetism strong force and the weak force are actually different aspects of the same force In general the relationship between the four forces can be described using a form of the equation for Analog Quadrature Amplitude Modulation Analog QAM This equation form is developed utilizing the concept of a blinking or discrete physical universe The approach to develop the solution is described by minimizing the number of available dimensions zero which is in contrast to numerous efforts String theory M theory Quantum gravity that attempt to maximize the number of dimensions under consideration An Electrical Universe EU model is presented that provides sufficient conditions for a solution This mathematical solution should be tested against experimental data to confirm its validity however it is noted that discrete time forces will be measured differently than time averaged forces in a laboratory environment Confirmation of the theory is suggested through small discrete time interval measurements of the gravitational acceleration force and the electromagnetic force where they will be seen to vary continuously and yet also retain a time averaged value Each reader must comprehend that our universe literally blinks off and on more than 1 trillion times every second      **Energy and water development appropriations for 1988** United States.
