Computer Applications in Production and Engineering Frank Plonka, Gustav J. Olling, 2013-06-05 In the latter half of the 20th century forces have conspired to make the human community at last global The easing of tensions between major nations the expansion of trade to worldwide markets widespread travel and cultural exchange pervasive high speed communications and automation the explosion of knowledge the streamlining of business and the adoption of flexible methods have changed the face of manufacturing itself and of research and education in manufacturing The acceptance of the continuous improvement process as a means for organizations to respond quickly and effectively to swings in the global market has led to the demand for individuals educated in a broad range of cultural organizational and technical fields and capable of absorbing and adapting required knowledge and training throughout their careers No longer will manufacturing research and education focus on an industrial sector or follow a national trend but rather will aim at enabling international teams of companies to cooperate in rapidly designing prototyping and manufacturing products The successful enterprise of the 21st century will be characterized by an organizational structure that efficiently responds to customer demands and changing global circumstances a corporate culture that empowers employees at all levels and encourages constant communication among related groups and a technological infrastructure that fully supports process improvement and integration In changing itself to keep abreast of the broader transformation in manufacturing the enterprise must look first at its organization and culture and thereafter at supporting technologies

Polymer 3D Printing and 3D Copying Technology Weimin Yang, Ranran Jian, 2023-07-21 This book focuses on 3D printing and molding copying technologies and approaches which innovatively proposes the concept of polymer 3D copying technology It introduces the two technologies of polymer 3D printing and 3D copying by analogy and elaborates the core principles and processes of polymer 3D copying technology the composition basic parameters and structure design of polymer 3D copying machines precision control methods defect generation mechanism and solutions of polymer 3D copying products and also discussed the future development of polymer 3D copying technology The novel concept of 3D copying is one of the major features of the book which is particularly suited for readers who are interested in rapid prototyping and molding The book is based on both traditional and new knowledges with novel content and concept focusing on both principles and engineering practice It systematically reflects the content and application of polymer 3D printing and 3D copying technology which can benefit researchers engineers and students of related majors engaged in the
