Henderson, Peter Plaschko, 2006-08-01 Traditionally non quantum physics has been concerned with deterministic equations where the dynamics of the system are completely determined by initial conditions A century ago the discovery of Brownian motion showed that nature need not be deterministic However it is only recently that there has been broad interest in nondeterministic and even chaotic systems not only in physics but in ecology and economics On a short term basis the stock market is nondeterministic and often chaotic Despite its significance there are few books available that introduce the reader to modern ideas in stochastic systems This book provides an introduction to this increasingly important field and includes a number of interesting applications

High-dimensional Microarray Data Analysis Shuichi Shinmura,2019-05-14 This book shows how to decompose high dimensional microarrays into small subspaces Small Matryoshkas SMs statistically analyze them and perform cancer gene diagnosis The information is useful for genetic experts anyone who analyzes genetic data and students to use as practical textbooks Discriminant analysis is the best approach for

microarray consisting of normal and cancer classes Microarrays are linearly separable data LSD Fact 3 However because most linear discriminant function LDF cannot discriminate LSD theoretically and error rates are high no one had discovered Fact 3 until now Hard margin SVM H SVM and Revised IP OLDF RIP can find Fact3 easily LSD has the Matryoshka structure and is easily decomposed into many SMs Fact 4 Because all SMs are small samples and LSD statistical methods analyze SMs easily However useful results cannot be obtained On the other hand H SVM and RIP can discriminate two classes in SM entirely RatioSV is the ratio of SV distance and discriminant range The maximum RatioSVs of six microarrays is over 11 67% This fact shows that SV separates two classes by window width 11 67% Such easy discrimination has been unresolved since 1970 The reason is revealed by facts presented here so this book can be read and enjoyed like a mystery novel Many studies point out that it is difficult to separate signal and noise in a high dimensional gene space However the definition of the signal is not clear Convincing evidence is presented that LSD is a signal Statistical analysis of the genes contained in the SM cannot provide useful information but it shows that the discriminant score DS discriminated by RIP or H SVM is easily LSD For example the Alon microarray has 2 000 genes which can be divided into 66 SMs If 66 DSs are used as variables the result is a 66 dimensional data These signal data can be analyzed to find malignancy indicators by principal component analysis and cluster analysis

The First Discriminant Theory of Linearly Separable Data Shuichi Shinmura, 2024-04-12 This book deals with the first discriminant theory of linearly separable data LSD Theory3 based on the four ordinary LSD of Theory1 and 169 microarrays LSD of Theory2 Furthermore you can quickly analyze the medical data with the misclassified patients which is the true purpose of diagnoses Author developed RIP Optimal linear discriminant function finding the combinatorial optimal solution as Theory1 in decades ago that found the minimum misclassifications RIP discriminated 63 26 1 models of Swiss banknote 200 6 and found the minimum LSD basic gene set BGS In Theory2 RIP discriminated Shipp microarray 77 7129 which was LSD and had only 32 nonzero coefficients first Small Matryoshka SM1 Because RIP discriminated another 7 097 genes and found SM2 the author developed the Matryoshka feature selection Method 2 Program 3 that splits microarray into many SMs Program4 can split microarray into many BGSs Then the wide columnLSD Revolution 0 such as microarray np is found to have several Matryoshka dolls including SM up to BGS p Theory3 shows the surprising results of six ordinary data re analyzed by Theory1 and Theory2 knowledge Essence of Theory3 is described by using cephalopelvic disproportion CPD data RIP discriminates CPD data 240 19 and finds two misclassifications unique for cesarean and natural born groups CPD238 omitting two patients becomes LSD which is the first case selection method Program4 finds BGS 14 vars the only variable selection method for Theory3 32 25 models including BGS become LSD among 219 1 models Because Program2 confirms BGS has the minimum average error rate BGS is the most compact and best model satisfying Occam's Razor With this book physicians obtain complete diagnostic results for disease and engineers can become a true data scientist by obtaining integral knowledge of statistics and mathematical programming with simple programs
