Problem 1

The numbers of weekly sales calls by a sample of 30 salesmen are listed below:

18	9	6	12	25	4	9	3	24	17
6	7	8	18	16	3	17	19	16	15
5	20	17	14	19	7	18	15	18	8

- Construct a relative frequency histogram for the data, using 4 class intervals and the value 0 as the lower limit of the 1st class, the value 24 as the upper limit of the 4th class?
- What proportion of the total area under the histogram fell between 12 and 20?

Problem 2

The finance director of a hardware wholesaler has asked the accountant to ring each customer five days before their account payment is due, as a means of reducing the number of late payments. As a result of this initiative, however, only 60% of customers receive such a call from the accountant. Of the customers called, 90% pay on time, while only 50% of those who do not called pay on time. The company has just received a payment on time from a customer, what is the probability that the accountant called this customer? (Hint: use probability tree)

Problem 3

How much money does a typical family of four spend at a McDonald's restaurant per visit? The amount is a normally distributed random variable with a mean of \$16.40 and a standard deviation is \$2.75.

- Find the probability that a family of four spends less than \$16.
- What is the amount spent at McDonald's by less than 10% of families?

Problem 4

Venture-capital firms provide financing for small, high-risk enterprises that have the potential to become highly profitable. A successful venture-capital firm notes that it provides financing for only 10% of the proposals it reviews. Of the 200 proposals submitted this year, what is the probability that more than 30 will receive financing? (Hint: use normal approximation to the binomial distribution)
