Probing Human Origins:

Probing Human Origins Morris Goodman, Anne Simon Moffat, 2002 Religion in Human Evolution Robert N. Bellah, 2011-09-15 This ambitious book probes our biological past to discover the kinds of lives that human beings have imagined were worth living Bellah's theory goes deep into cultural and genetic evolution to identify a range of capacities communal dancing storytelling theorizing whose emergence made religious development possible in the first millennium BCE

Memetics Tim Tyler, 2011-08-19 Memetics is the name commonly given to the study of memes a term originally coined by Richard Dawkins to describe small inherited elements of human culture Memes are the cultural equivalent of DNA genes and memetics is the cultural equivalent of genetics Memes have become ubiquitous in the modern world but there has been relatively little proper scientific study of how they arise spread and change apparently due to turf wars within the social sciences and misguided resistance to Darwinian explanations being applied to human behaviour However with the modern explosion of internet memes I think this is bound to change With memes penetrating into every mass media channel and with major companies riding on their coat tails for marketing purposes social scientists will surely not be able to keep the subject at arm's length for much longer This will be good because an understanding of memes is important Memes are important for marketing and advertising They are important for defending against marketing and advertising They are important for understanding and managing your own mind They are important for understanding science politics religion causes propaganda and popular culture Memetics is important for understanding the origin and evolution of modern humans It provides insight into the rise of farming science industry technology and machines It is important for understanding the future of technological change and human evolution This book covers the basic concepts of memetics giving an overview of its history development applications and the controversy that has been associated with it Mating Intelligence Glenn Geher, Geoffrey Miller, Geoffrey F. Apes and Human Evolution Russell H. Tuttle, 2014-02-17 In this masterwork Russell H Tuttle synthesizes a vast research literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why humans became a bipedal tool making culture inventing species distinct from other hominoids Along the way he refutes the influential theory that men are essentially killer apes sophisticated but instinctively aggressive and destructive beings Situating humans in a broad context Tuttle musters convincing evidence from morphology and recent fossil discoveries to reveal what early primates ate where they slept how they learned to walk upright how brain and hand anatomy evolved simultaneously and what else happened evolutionarily to cause humans to diverge from their closest relatives Despite our genomic similarities with bonobos chimpanzees and gorillas humans are unique among primates in occupying a symbolic niche of values and beliefs based on symbolically mediated cognitive processes Although apes exhibit behaviors that strongly suggest they can think salient elements of human culture speech mating proscriptions kinship structures and moral codes are symbolic systems that are not manifest in ape niches This encyclopedic volume is both a milestone in primatological research and a critique of what is known and yet to be discovered about human and ape potential

Hominin Environments in the East African Pliocene René Bobe, Zeresenay Alemseged, Anna K. Behrensmeyer, 2007-09-08 This volume presents the work of researchers at many sites spanning the East African Pliocene The authors take a broad approach that seeks to compare paleoenvironmental and paleoecological patterns across localities and among various taxonomic groups This volume aims to synthesize large amounts of faunal data and to present the evolution of East African vertebrates in the context of environmental and climatic changes during the Pliocene

The Origins and Nature of Sociality Robert W. Sussman, 2017-07-05 Scientific developments have increasingly been transforming our understanding of the place of human beings in nature The contributors to this book focus on the current status of research on sociality and the evolution of cooperative and altruistic behaviour in non human and human primates They examine questions related to the evolution cultural viability and hormonal underpinnings of human sociality in specific detail and describe patterns of sociality that shed light on human social behaviour

Before Modern Humans Grant S. McCall, 2020-09-10 This fascinating volume assessing Lower and Middle Pleistocene African prehistory argues that the onset of the Middle Stone Age marks the origins of landscape use patterns resembling those of modern human foragers Inaugurating a paradigm shift in our understanding of modern human behavior Grant McCall argues that this transition related to the origins of home base residential site use occurred in mosaic fashion over the course of hundreds of thousands of years He concludes by proposing a model of brain evolution driven by increasing subsistence diversity and

intensity against the backdrop of larger populations and Pleistocene environmental unpredictability McCall argues that human brain size did not arise to support the complex patterns of social behavior that pervade our lives today but instead large human brains were co-opted for these purposes relatively late in prehistory accounting for the striking archaeological record of the Upper Pleistocene *The Evolution of Human Consciousness and Linguistic Behavior*, Karen A.

Haworth, Terry J. Prewitt, 2020-09-22 Drawing from the disciplines of cognitive science Paleolithic anthropology art history and semiotics Karen A Haworth and Terry J Prewitt offer a novel discussion of the origins of language based primarily in the distinction of holistic versus analytical cognitive processing Also by employing a refined view of human symbolizing capacities grounded in the writings of C S Peirce they provide a short but comprehensive explanation of what the artifacts and art of the Paleolithic and Mesolithic periods suggest about language origins Their interpretation supports a semiotic argument that iconic and indexical logical modeling precedes human elaboration of experience by symbolic reference in words or propositions and ultimately in what Peirce called the argument Further they suggest that the use of symbols to model the world developed rapidly between about 20 000 and 10 000 years ago and has the effect of giving emphasis to analytic thought as the dominant mode of human consciousness Rather than seeing symbols as the impetus for human logic they argue for presymbolic elements of logic in Peirce's sign categories shared widely by humans and other animals Intended readers are scholars in philosophy anthropology psychology linguistics and semiotics as well as interested nonspecialists The presentation is also complemented with brief personal narratives intended to offer background that helps make a dense academic argument more accessible to the widest audience possible The authors insights into the basis for language have ramifications for any number of other fields education psychology philosophy prehistory and art to name a few

Braun, 2010-08-26 This volume brings together a group of authors that address the question of the first out of Africa into Asia c 2 Ma The scope of the book is comprehensive as it covers almost every major region of Asia The primary goal of this volume is to provide an updated synthesis of the current state of the Asian paleoanthropological and paleoenvironmental records Papers include detailed studies of the theoretical constructs underlying the move out of Africa including detailed reconstructions of the paleoenvironment and possible migration routes Other papers detail the Plio-Pleistocene

archaeological and hominin fossil records of particular regions *Assembling the Tree of Life* Joel Cracraft, Michael J. Donoghue, 2004-07-22 This edited volume provides an authoritative synthesis of knowledge about the history of life. All the major groups of organisms are treated by the leading workers in their fields. With sections on The Importance of Knowing the Tree of Life, The Origin and Radiation of Life on Earth, The Relationships of Green Plants, The Relationships of Fungi, and The Relationships of Animals, this book should prove indispensable for evolutionary biologists, taxonomists, ecologists, and those interested in biodiversity. It is also a baseline sourcebook for organismic biologists, botanists, and microbiologists. An essential reference in this fundamental area.

The Foundations of Cognitive Archaeology Marc A. Abramiuk, 2012 In *The foundations of cognitive archaeology*, Marc Abramiuk proposes a multidisciplinary basis for the study of the mind in the past, arguing that archaeology and the cognitive sciences have much to offer one another. Abramiuk draws on relevant topics from philosophy, biological anthropology, cognitive psychology, cognitive anthropology, and archaeology to establish theoretically founded and empirically substantiated principles of a discipline that integrates different approaches to mind-related archaeological research.

Publisher description The End of the Long Summer Dianne Dumanoski, 2010-07-13 For the past twelve thousand years, Earth's stable climate has allowed human civilization to flourish. But this long benign summer is an anomaly in the Earth's history, and one that is rapidly coming to a close. The radical experiment of our modern industrial civilization is now disrupting our planet's very metabolism; our future hinges in large part on how Earth responds. Climate change is already bearing down, hitting harder and faster than expected. The greatest danger is not extreme yet discrete weather events such as Hurricane Katrina or the calamitous wildfires that now plague California, but profound and systemic disruptions on a global scale. Contrary to the pervasive belief that climate change will be a gradual escalator ride into balmy temperatures, the Earth's climate system has a history of radical shifts, dramatic shocks that could lead to the collapse of social and economic systems. The question is no longer simply how can we stop climate change, but how can we as a civilization survive it. The guiding values of modern culture have become dangerously obsolete in this new era. Yet as renowned environmental journalist Dianne Dumanoski shows, little has been done to avert the crisis or to prepare human societies for a time of growing instability. In a work of astonishing scope, Dumanoski deftly weaves history, science, and culture to show how the fundamental doctrines of modern society have impeded our ability to respond to this crisis and have fostered an economic globalization that is only increasing our vulnerability at this critical time. She exposes the fallacy of banking on a last-minute technological fix, as well as the perilous trap of believing that humans can succeed in the quest to control nature. Only by restructuring our global civilization based on the principles that have allowed Earth's life and our ancestors to survive catastrophe—diversity, redundancy, a degree of self-sufficiency, social solidarity, and an aversion to excessive integration—can we restore the flexibility needed to weather the trials ahead. In this powerful and prescient book, Dumanoski moves beyond now-ubiquitous environmental buzzwords about green industries and clean energy to provide a new cultural map through this
