Problems In Gynaecology:

Problems in Gynaecology E.P.W. Tatford, 2012-12-06 There is ample opportunity and scope for gynaecology in primary care in general practice. Many conditions and problems can be managed successfully in this context without referral to hospital and specialist care. The first aim of this book is to deal with common problems that are referred for consultant opinion and specialist management to the average District General Hospital by analysing problems of presentation and diagnosis on a symptom orientated basis. Selection for primary care management as opposed to hospital referral is then considered following which the wide range of available treatment is evaluated with particular emphasis on the maximum use of up to date but proven regimes. The full use of the expertise of the practitioner is highlighted throughout. The second aim is to encourage the practice of primary care gynaecology and to help those doctors who have a special interest in the subject while hopefully stimulating others to develop a similar one. With this in mind the approach to the problems is realistic and often dogmatic while opportunities for individual management and for practical procedures are kept to the forefront.

Listening to Gynaecological Patients' Problems David Jenkins, 2012-12-06 Gynaecological textbooks are divided into sections according to pathological diagnoses not according to symptoms or symptom complexes. Students of gynaecology because they initially acquire information from textbooks are conditioned by the organisation of these texts to think of gynaecology in terms of pathological entities rather than symptom complexes. Gynaecological patients however do not present complaining of endometriosis or endometrial malignancy or hypophyseal ovarian dysfunction rather they present with symptoms such as pain low down in the tummy bleeding from the front passage or irregular periods. This book attempts to help students of gynaecology including everyone from students learning the subject for the first time through family doctors to doctors of all grades to approach their patients as people as distinct from pathological entities to listen to them and to communicate with them. In order to help achieve this the text is divided according to symptoms or related groups of symptoms. Within each division pertinent questions are listed in the words that might be used in addressing a patient followed by a key explaining the significance of the questions and a brief discussion of the problems under consideration. It is hoped that this approach will facilitate the taking and interpretation of case histories thus aiding differential diagnosis and clinical management and will initiate the process of self teaching. The book tries to emphasise that especially in gynaecology the same symptom e.g. heavy periods may have a very different significance in different patients in terms of diagnosis and management.
