Problems of Modern Science Arthur Dendy, 1922 **Irregularities and Prediction of Major Disasters** Yi Lin, Shoucheng OuYang, 2010-03-18 Although scientists have effectively employed the concepts of probability to address the complex problem of prediction modern science still falls short in establishing true predictions with meaningful lead times of zero probability major disasters. Jahnke, M. Otte, 2012-12-06 I Some Characteristic Features of the Passage From the 18th to the 19th Century 1 The following notes grew out of reflections which first led us to send out invitations to and call for papers for an interdisciplinary workshop which took place in Bielefeld from 27th to 30th November 1979 The status and character of this preface is therefore somewhat ambiguous on the one hand it does not comment extensively on the articles to follow on the other hand it could not have been conceived and written in the way it was without knowledge of

all the contributions to this volum which contains revised editions of papers for the workshop nor without the cooperation of the participants in the above mentioned symposium Furthermore although the following may sound slightly programmatic and summary we hope that it will be sufficiently explicit to provide some key words and concepts useful for further scholarly work Perhaps the most important result of our efforts is the very structure of these notes it is aimed at providing methodological orientations for the investigation of what turned out to be a very peculiar period in the history of science xi H N Jahnke and M Otte eds Epistemological and Social Problems of the Sciences in the Early Nineteenth Century xi xlii Copyright 1981 by D Reidel Publishing Company xii H N JAHNKE ET AL **Beyond Nonstructural Quantitative** Analysis: Blown-ups, Spinning Currents And Modern Science Yi Lin, Yong Wu, 2002-01-29 This book summarizes the main scientific achievements of the blown up theory of evolution science which was first seen in published form in 1994 It explores using the viewpoint and methodology of the blown up theory possible generalizations of Newtonian particle mechanics and computational schemes developed on Newton's and Leibniz's calculus as well as the scientific systems and the corresponding epistemological propositions introduced and polished in the past three hundred years The authors briefly explain the fundamental concepts then analyze a series of topics and problems of the current active research widely carried out in the natural sciences Along the lines of the analyses they introduce new points of view and the corresponding methods Also they point out that the blown up theory originated from the idea of mutual slavings of materials structures so that numbers are transformed into forms This discovery reveals that nonlinearity is not a problem solvable in the first push system and that the materials property of rotation is not only an epistemology but also a methodology. The authors then point to the fact that nonlinearity is a second stir of mutual slavings of materials God, Life, and the Cosmos Ted Peters, Muzaffar Iqbal, Syed Nomanul Haq, 2017-03-02 God Life and the Cosmos Christian and Islamic Perspectives is the first book in which Christian and Muslim scholars explore the frontiers of science religion discourse Leading international scholars present new work on key issues in science and religion from Christian and Islamic perspectives Following an introduction by the editors the book is divided into three sections the first explores the philosophical issues in science religion discourse the second examines cosmology the third analyses the issues surrounding bioethics. One of the first books to explore aspects of science religion discourse from the perspective of two religious traditions God Life and the Cosmos opens up new vistas to all interested in science and religion and those exploring contemporary issues in Christianity and Our Fundamental Problem Nicholas Maxwell, 2020-06-03 How can the world we live in and see touch hear and Islam smell the world of living things people consciousness free will meaning and value how can all of this exist and flourish embedded as it is in the physical universe made up of nothing but physical entities such as electrons and guarks How can anything be of value if everything in the universe is ultimately just physics In Our Fundamental Problem Nicholas Maxwell argues that this problem of reconciling the human and physical worlds needs to take centre stage in our thinking so that our
