Comprehensive Semiconductor Science and Technology ,2011-01-28 Semiconductors are at the heart of modern living Almost everything we do be it work travel communication or entertainment all depend on some feature of semiconductor technology Comprehensive Semiconductor Science and Technology Six Volume Set captures the breadth of this important field and presents it in a single source to the large audience who study make and exploit semiconductors Previous attempts at this achievement have been abbreviated and have omitted important topics Written and Edited by a truly international team of experts this work delivers an objective yet cohesive global review of the semiconductor world The work is divided into three sections The first section is concerned with the fundamental physics of semiconductors showing how the electronic features and the lattice dynamics change drastically when systems vary from bulk to a low dimensional structure and further to a nanometer size Throughout this section there is an emphasis on the full understanding of the underlying physics The second section deals largely with the transformation of the conceptual framework of solid state physics into devices and systems which require the growth of extremely high purity nearly defect free bulk and epitaxial materials The last section is devoted to exploitation of the knowledge described in the previous sections to highlight the spectrum of devices we see all around us Provides a comprehensive global picture of the semiconductor world Each of the work s three sections presents a complete description of one aspect of the whole Written and Edited by a truly international team of experts *Publications of the National Bureau of Standards ... National Bureau of Standards,1978 **Modelling of Crack Growth in Single-Crystal Nickel-Base Superalloys** Christian Busse,2019-09-24 This dissertation was produced at the Division of Solid Mechanics at Link ping University and is

part of a research project which comprises modelling microstructure investigations and material testing of cast nickel base superalloys. The main objective of this work was to deepen the understanding of the fracture behaviour of single crystal nickel base superalloys and to develop a model to predict the fatigue crack growth behaviour. Frequently crack growth in these materials has been observed to follow one of two distinct cracking modes: Mode I like cracking perpendicular to the loading direction or crystallographic crack growth on the octahedral 111 planes where the latter is associated with an increased fatigue crack growth rate. Thus it is of major importance to account for this behaviour in component life prediction. Consequently a model for the prediction of the transition of cracking modes and the correct active crystallographic plane in the crack path and the crystallographic crack growth rate has been developed. This model is based on the evaluation of appropriate crack driving forces using three dimensional finite element simulations. A special focus was given towards the influence of the crystallographic orientation on the fracture behaviour. Further a model to incorporate residual stresses in the crack growth modelling is presented. All modelling work is calibrated and validated by experiments on different specimen geometries with different crystallographic orientations. This dissertation consists of two parts where Part I gives an introduction and background to the field of research while Part II consists of six appended papers.

Die vorliegende Dissertation wurde in der Abteilung für Festigkeitslehre an der Universität von Linköping erstellt und ist Teil eines Forschungsprojektes welches Modellierung Mikrostrukturuntersuchungen und Materialtests von gegossenen nickelbasierten Superlegierungen umfasst. Das Hauptziel dieser Arbeit war es das Verständnis des Bruchverhaltens von einkristallinen Superlegierungen auf Nickelbasis zu vertiefen und ein Modell zur Vorhersage des Wachstumsverhaltens von Ermüdungsrissen zu entwickeln. Es wurde beobachtet dass das Risswachstum in diesen Materialien einem von zwei unterschiedlichen Rissmodi folgt: Modus I Rissfortschritt senkrecht zur Belastungsrichtung oder kristallographisches Risswachstum auf den oktaedrischen $\{111\}$ Ebenen wobei letzteres mit einer erhöhten Ermüdungsrisswachstumsrate verbunden ist. Somit ist es von grosser Bedeutung dieses Verhalten in der Lebensdauervorhersage einer Komponente zu berücksichtigen. Demzufolge wurde ein Modell für die Vorhersage des Übergangs zwischen den Rissmodi und der korrekten aktiven kristallographischen Ebene und des Risspfades sowie der kristallographischen Risswachstumsrate erarbeitet. Dieses Modell basiert auf geeigneten Rissantriebskräften welche mit Hilfe dreidimensionaler Finite Elemente Simulationen berechnet werden. Im Fokus stand insbesondere der Einfluss der kristallographischen Orientierung auf das Bruchverhalten. Ausserdem wird ein Modell zur Berücksichtigung von Restspannungen in der Risswachstumsmodellierung präsentiert. Alle Modellierungsarbeiten wurden durch Experimente an verschiedenen Probengeometrien mit unterschiedlichen kristallographischen Orientierungen kalibriert und validiert. Diese Dissertation besteht aus zwei Teilen wobei Teil I aus einer Einführung und einem Hintergrund in das Forschungsgebiet und Teil II aus sechs beigefügten Forschungsartikeln besteht.
