

Arthur Holzbaur, 85, structural engineer

By Wendy Beech
INQUIRER CORRESPONDENT

Arthur A. Holzbaur, 85, a structural engineer who assisted in building the first all-welded ocean-going vessel during World War II, died Thursday at Southern Ocean County Hospital in Manahawkin. He had lived in Beach Haven Terrace since 1973.

A 1930 civil-engineering graduate of Rutgers University, Mr. Holzbaur began working as an engineer at McClintic-Marshall in Pottstown, Pa. In 1936, he joined the Sun Shipbuilding & Dry Dock Co. in Chester, where he and a crew of nearly 4,000 men began constructing the merchant ship Van Dyke.

"Ships at one time were all riveted, but as shipbuilding progressed and we got more expertise, everything was welded," said Edward LaCross, a longtime friend and co-worker of Mr. Holzbaur's.

While at Sun Ship, Mr. Holzbaur worked his way through the ranks: as welding superintendent, hull superintendent, and vice president of operations.

"He had thousands of men working under him," said Margaret Burkle Holzbaur, his wife of 20 years. "But he didn't like being indoors, so when they made him vice president, he quit but came back later as superintendent of the yard."

The last ship Mr. Holzbaur worked on was an ocean-floor exploration ship financed by millionaire Howard Hughes, said Mr. Holzbaur's stepson, Robert Sulat. That ship's development was chronicled in a book titled *The Jennifer Project*. Mr. Sulat said that the vessel was used to mine minerals on the ocean floor but that he suspects it also was involved in secret government missions.

As a member of the Society of Naval Architects and Marine Engineers and of the American Welding Society and its national board of directors, Mr. Holzbaur assisted in writing *Codes and Specifications Concerning Welding in Marine Construction*, a book detailing the development of the all-welded ship.

He was voted an honorary life

membership in the Society of Naval Architects and Marine Engineers for his contributions to the welding field.

He was a member of the Amwell Lodge of Lambertville and the Scottish Rite Body and past president of the Long Beach Island Historical Association and the Men's Garden Club of Long Beach Island. An animal lover, he lectured on birds and wildlife.

Mr. Holzbaur's first wife, Loretta, died in 1972.

In addition to his wife and stepson, he is survived by another stepson, Jerry Sulat of Mantua; a daughter, Polly Davis of Glastonbury, Conn.; a grandchild; and sisters, Marjorie Scarborough and Ethel Horton, both of Lambertville.

Memorial service: 10 a.m. Sept. 24 at the First United Methodist Church, New Jersey Avenue and Beach Avenue, Beach Haven Terrace.

The family requests that donations be made to St. Francis Parish Center, Long Beach Boulevard, Brant Beach, N.J., 08008.

Advanced Dynamics and Control of Structures and Machines Hans Irschik, Kurt Schlacher, 2014-05-04 This book intended for people in engineering and fundamental sciences presents an integrated mathematical methodology for advanced dynamics and control of structures and machines ranging from the derivation of models up to the control synthesis problem This point of view is particularly useful as the physical insight and the associated structural properties related e g to the Lagrangian or Hamiltonian framework can be advantageously utilized To this end up to date results in disciplines like continuum mechanics analytical mechanics thermodynamics and electrodynamics are presented exploiting the differential geometric properties with the basic notions of this coordinate free approach revisited in an own chapter In order to illustrate the proposed methodologies several industrial applications e g the derivation of exact solutions for the deformation compensation by shaped actuation in elastic bodies or the coordination of rigid and flexible joint robots are discussed

Structural Control - Proceedings Of The First European Conference A Baratta, Jose Rodellar, 1997-03-18 Structural control offers opportunities to design new structures and to retrofit existing structures by the application of counter forces smart materials frictional devices etc instead of just increasing the strength of the structure at greater cost The Association for the Control of Structures ACS is promoting in Europe the development of this new technology in architectural design and infrastructure renewal and rehabilitation The First European Conference on Structural Control was organized as one of the major initiatives toward this objective

Structural Engineering, Mechanics and Computation A. Zingoni, 2001-03-16 Following on from the International Conference on Structural Engineering Mechanics and Computation held in Cape Town in April 2001 this book contains the Proceedings in two volumes There are over 170 papers written by Authors from around 40 countries worldwide The contributions include 6 Keynote Papers and 12 Special Invited Papers In line with the aims of the SEMC 2001 International Conference and as may be seen from the List of Contents the papers cover a wide range of topics under a variety of themes There is a healthy balance

between papers of a theoretical nature concerned with various aspects of structural mechanics and computational issues and those of a more practical nature addressing issues of design safety and construction. As the contributions in these Proceedings show, new and more efficient methods of structural analysis and numerical computation are being explored all the time while exciting structural materials such as glass have recently come onto the scene. Research interest in the repair and rehabilitation of existing infrastructure continues to grow particularly in Europe and North America while the challenges to protect human life and property against the effects of fire, earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings, bridges and other engineering structures.

The range of fibre reinforced polymer (FRP) applications in new construction and in the retrofitting of existing civil engineering infrastructure is continuing to grow worldwide. Furthermore, this progress is being matched by advancing research into all aspects of analysis and design.

The Second International Conference on FRP Composites in Moment Resistant Connections of Steel Frames in Seismic Areas Federico Mazzolani, 2000-04-27. An unexpected brittle failure of connections and of members occurred during the last earthquakes of Northridge and Kobe. For this reason, a heightened awareness developed in the international scientific community, particularly in the earthquake-prone countries of the Mediterranean and Eastern Europe, of the urgent need to investigate this topic. This volume results from a European project dealing with the reliability of moment-resistant connections of steel frames in seismic areas. It is a must-have for engineers who want to be at the cutting edge of design in seismic areas.
