Maekawa Kunio and the Emergence of Japanese Modernist Architecture Jonathan M. Reynolds, 2001-07-19 Japanese architecture's commanding presence on the world stage can be traced to the struggles of earlier generations of Japan's modernist architects. This first book-length study of Maekawa Kunio (1905-1986) focuses on one of the most distinctive leaders in Japan's modernist architectural community. In a career spanning the 1930s to the 1980s, Maekawa's work and critical writing put him in the vanguard of the Japanese architectural profession. Jonathan Reynolds illuminates Maekawa's role as a bridge between prewar and postwar architecture in Japan, focusing particularly on how he influenced modernism's ambivalence regarding tradition and contemporary practice and the importance of technology in modernist design and ideology. Maekawa studied architecture at the prestigious Tokyo Imperial University before moving to Paris in 1928 to work with Le Corbusier. The latter experience had a powerful impact on Maekawa; he became an advocate for Le Corbusier and modernism when he returned to Japan two years later. Throughout his career, Maekawa designed residential, commercial, and government buildings in Japan and abroad. He became particularly well known internationally for his approach to public architecture, especially museums and public spaces such as the Tokyo Metropolitan Festival Hall. These projects illustrated the principles that earned Maekawa the respect and admiration of architects the world over. Carefully researched with numerous illustrations that complement discussions of Maekawa's principal projects, Reynolds's book will be welcomed in the fields of architecture and design. It will also attract readers interested in twentieth-century Japan. In addition to highlighting Maekawa's architectural career, Reynolds portrays the broader cultural context within which Maekawa and other Japanese architects and artists sought to be heard and recognized.

Japanese Architecture as a Collaborative Process Dana Buntrock, 2001. Readers will find this book offers them both insights into the nature of architectural practice in their own communities and surprising alternatives. **BOOK JACKET** *Japan English Publications in Print*, 1998

ITS Sensors and Architectures for Traffic Management and Connected Vehicles Lawrence A. Klein, 2017-08-07 An intelligent transportation system (ITS) offers considerable opportunities for increasing the safety, efficiency, and predictability of traffic flow and reducing vehicle emissions. Sensors or detectors enable the effective gathering of arterial and controlled access highway information in support of automatic incident detection, active transportation and demand management, traffic adaptive signal control, and ramp and freeway metering and dispatching of emergency response providers. As traffic flow sensors are integrated with big data sources such as connected and cooperative vehicles and cell phones and other Bluetooth-enabled devices, more accurate and timely traffic flow information can be obtained. The book examines the roles of traffic management centers that serve cities, counties, and other regions and the collocation issues that ensue when multiple agencies share the same space. It describes sensor applications and data requirements for several ITS strategies: sensor technologies, sensor installation, initialization, and field testing procedures, and alternate sources of traffic flow data. The book

addresses concerns related to the introduction of automated and connected vehicles and the benefits that systems engineering and national ITS architectures in the US Europe Japan and elsewhere bring to ITS Sensor and data fusion benefits to traffic management are described while the Bayesian and Dempster Shafer approaches to data fusion are discussed in more detail ITS Sensors and Architectures for Traffic Management and Connected Vehicles suits the needs of personnel in transportation institutes and highway agencies and students in undergraduate or graduate transportation engineering courses
