Voice and Speech Quality Perception Ute Jekosch,2005-08-02 Foundations of

Voice and Speech Quality Perception starts out with the fundamental question of How do listeners perceive voice and speech quality and how can these processes be modeled Any quantitative answers require measurements This is natural for physical quantities but harder to imagine for perceptual measurands This book approaches the problem by actually identifying major perceptual dimensions of voice and speech quality perception defining units wherever possible and offering paradigms to position these dimensions into a structural skeleton of perceptual speech and voice quality The emphasis is placed on voice and speech quality assessment of systems in artificial scenarios Many scientific fields are involved This book bridges the gap between two quite diverse fields engineering and humanities and establishes the new research area of Voice and Speech Quality Perception

Speech Enhancement Jacob Benesty, Shoji Makino, Jingdong Chen, 2006-03-30 We live in a noisy world In all applications telecommunications hands free communications recording human machine interfaces etc that require at least one microphone the signal of interest is usually contaminated by noise and reverberation As a result the microphone signal has to be cleaned with digital signal processing tools before it is played out transmitted or stored This book is about speech enhancement Different well known and state of the art methods for noise reduction with one or multiple microphones are discussed By speech enhancement we mean not only noise reduction but also dereverberation and separation of independent signals These topics are also covered in this book However the general emphasis is on noise reduction because of the large number of applications that can benefit from this technology The goal of this book is to provide a strong reference for researchers engineers and graduate students who are interested in the problem of signal and speech enhancement To do so we invited well known experts to contribute chapters covering the state of the art in this focused field

Wireless Communications 2007 CNIT Tyrrhenian Symposium Silvano Pupolin, 2007-12-18 The 18th Tyrrhenian Workshop on digital communications is devoted to wireless communications In the last decade wireless communications research boosted launching new standards and proposing new techniques for the next technology We moved from the UTRA standard capable to transmit 0.5 bit/s/Hz to WLAN which is promising 2.7 bit/s/Hz Now wireless communication systems are facing a flourishing of new proposals moving from multiple antennas at transmitter and receiver side MIMO systems to new powerful Forward Error Correction Codes to adaptive radio resource management algorithms The new challenge however is the move towards multimedia communications and IP technology This move implies efforts in several new aspects First of all an open network as IP imposes the necessity of a secure network to guarantee the privacy of the ongoing communications avoid the use of the networks by unauthorized customers avoid the misuses and the charge to third parties of the cost of the connection Also quality of service QoS of the communications is becoming a must in IP networks which are carrying services which need a guaranteed QoS as telephony real time services etc To get this new target some form of access control to the network must be setup Recently new form of communication networks has appeared to collect data for several applications sensor networks ad hoc networks etc and they need a connection with a backbone network which could be a
