Vince _ _ 1 Introduction The USPresident s Information Technology Advisory Committee PITAC recently advised the US

Senate of the strategic importance of investing in IT for the 21st century particularly in the areas of software human computer interaction scalable information infrastructure high end computing and socioeconomic issues 1 Research frontiers of human computer interaction include the desire that interaction be more centered around human needs and capabilities and that the human environment be considered in virtual environments and in other contextual information processing activities The overall goal is to make users more effective in their information or communication tasks by reducing learning times speeding performance lowering error rates facilitating retention and increasing subjective satisfaction Improved designs can dramatically increase effectiveness for users who range from novices to experts and who have diverse cultures with varying educational backgrounds Their lives could be made more satisfying their work safer their learning easier and their health better

New Trends in Software Methodologies, Tools and Techniques A. Selamat, H. Fujita, H. Haron, 2014-08-29 Software is the essential enabling means for science and the new economy It helps us to create a more reliable flexible and robust society But software often falls short of our expectations Current methodologies tools and techniques remain expensive and are not yet sufficiently reliable while many promising approaches have proved to be no more than case by case oriented methods This book contains extensively reviewed papers from the thirteenth International Conference on New Trends in software Methodology Tools and Techniques SoMeT_14 held in Langkawi Malaysia in September 2014 The conference provides an opportunity for scholars from the international research community to discuss and share research experiences of new software methodologies and techniques and the contributions presented here address issues ranging from research practices and techniques and methodologies to proposing and reporting solutions for global world business The emphasis has been on human centric software methodologies end user development techniques and emotional reasoning for an optimally harmonized performance between the design tool and the user Topics covered include the handling of cognitive issues in software development to adapt it to the user's mental state and intelligent software design in software utilizing new aspects on conceptual ontology and semantics reflected on knowledge base system models This book provides an opportunity for the software science community to show where we are today and where the future may take us
