Advances in Computer, Information, and Systems Sciences, and Engineering Khaled Elleithy,Tarek Sobh,Ausif Mahmood,Magued Iskander,Mohammad A. Karim,2007-06-06 The conference proceedings of International Conference on Industrial Electronics Technology not only the reviewing submissions and registration processes but also the actual conference Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office Suffice to say that CISSE received submissions from more than 50 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing software runs on Windows Mac and any other operating system that supports Java In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session The

implemented conferencing technology starting with the submission review system and ending with the online conferencing capability allowed CISSE to conduct a very high quality fulfilling event for all participants See www.cissee2005.org sections IETA TENE EIAE

Ambient Intelligence Werner Weber, Jan Rabaey, Emile H.L. Aarts, 2005-12-12 Ambient intelligence is the vision of a technology that will become invisibly embedded in our natural surroundings present whenever we need it enabled by simple and effortless interactions attuned to all our senses adaptive to users and context sensitive and autonomous High quality information access and personalized content must be available to everybody anywhere and at any time This book addresses ambient intelligence used to support human contacts and accompany an individual's path through the complicated modern world From the technical standpoint distributed electronic intelligence is addressed as hardware vanishing into the background Devices used for ambient intelligence are small low power low weight and very importantly low cost they collaborate or interact with each other and they are redundant and error tolerant This means that the failure of one device will not cause failure of the whole system Since wired connections often do not exist radio methods will play an important role for data transfer This book addresses various aspects of ambient intelligence from applications that are imminent since they use essentially existing technologies to ambitious ideas whose realization is still far away due to major unsolved technical challenges

Sensor Networks Gianluigi Ferrari, 2010-03-10 The idea of this book comes from the observation that sensor networks represent a topic of interest from both theoretical and practical perspectives The title und lines that sensor networks offer the unique opportunity of clearly linking theory with practice In fact owing to their typical low cost academic researchers have the opportunity of implementing sensor network testbeds to check the validity of their theories algorithms protocols etc in reality Likewise a practitioner has the opportunity of understanding what are the principles behind the sensor networks under use and thus how to properly tune some accessible network parameters to improve the performance On the basis of the observations above the book has been structured in three parts Part I is denoted as Theory since the topics of its three chapters are apparently detached from real scenarios Part II is denoted as Theory and Practice since the topics of its three chapters although theoretical have a clear connection with specific practical scenarios Part III is denoted as Practice since the topics of its three chapters are clearly related to practical applications
